**PHASE I ENVIRONMENTAL SITE ASSESSMENT
INSILCO, FACTORY H SITE
77 COOPER STREET
MERIDEN, CONNETICUT**

1.0 Introduction

Metcalf & Eddy, Inc. (M&E) was contracted by the City of Meriden, Connecticut to perform a Phase I Environmental Site Assessment (ESA) at the International Silver Company (INSILCO), Factory H property (hereinafter referred to as the “site”), located at 77 Cooper Street in Meriden, Connecticut (Figure 1). The purpose of the Phase I ESA is to identify the potential presence of hazardous materials or petroleum products on the site based on historical site activities or activities in nearby areas. This work is based on the Connecticut Department of Environmental Protection (CTDEP) *Draft Characterization Guidance Document* (June 1989) and the ASTM 1527-2005 Phase I Environmental Site Assessment Standard. The Phase I ESA meets the requirements of USEPA’s *All Appropriate Inquiry* policy.

M&E conducted this Phase I ESA by performing investigation and research activities to identify areas of recognized environmental conditions (REC), herein referred to as areas of concern (AOCs). Specific tasks conducted for the Phase I ESA included: a site inspection, a compilation and review of existing and relative site specific information, interviews with an official from the Connecticut Department of Environmental Protection (CTDEP) and two neighboring property owners, review of local, state and federal records and preparation of a Phase I ESA report. All observations, findings and conclusions presented in this report should be considered with respect to the Statement of Limitations included in Appendix 1. The qualifications of the environmental professionals are provided in Appendix 2.

2.0 Scope of Work

The scope of work for this environmental site assessment is summarized below.

Task 1. Conduct Facility Visit and Interviews with Regulatory Official (CTDEP) and Neighboring Property Owners. M&E conducted a site reconnaissance on March 7, 2006 to evaluate site usage, environmental conditions, and potential storage or discharges of oil or hazardous materials on the site. The interiors of Buildings B and C were also evaluated during the site visit. Evaluation of Building A was excluded from this Phase I ESA due to accessibility

and safety concerns, and was not included in the scope of this evaluation. Site features and conditions were photographed and observations were recorded.

In addition to the site reconnaissance, M&E conducted several interviews. M&E discussed CTDEP stabilization/removal activities conducted at the site during 2005 with Mr. Raymond Frigon, of the CTDEP. M&E also conducted an interview via telephone with Ms. Maryellen Mordarski, Chairman of the Meriden Conservation (Land) Commission. Ms. Mordarski has been a resident for nearly 55 years at 65 Cherry Street, which is adjacent to the site. M&E also conducted an interview with via telephone with Mr. Louis Scionti, the owner of Louie's Auto Body, located at 55 Cooper Street and adjacent to the site. Mr. Scionti has owned the property at 55 Cooper Street since the late 1970s. The purpose of these interviews was to obtain information about uses and conditions of the site prior to, and following, abandonment, including up to the present. Additional information regarding miscellaneous dumping of oil or other hazardous materials at the site was also discussed during this interview.

Task 2. Order and Review Environmental Database Records for Site. The purpose of the database records review was to obtain and review records that helped identify recognized environmental conditions in connection with the site. M&E utilized the services of an environmental database provider, Environmental Data Resources, Inc. (EDR), to assemble environmental records for the site. The database records review consisted of information from standard sources such as the Federal NPL site list, Federal RCRA generators list and State lists of registered and/or leaking underground storage tanks (EDR report, February 23, 2006).

The database records review included a map indicating the location of the facility and the locations of any identified environmental concerns within a one-mile radius from the facility as identified through the records review. The database records review also included Sanborn Fire Insurance maps to the extent that they are available.

Task 3. Review State and Local Files for Subject Facilities. M&E reviewed additional records available from state sources including the CTDEP and State Library, both located in Hartford, CT, for the site. M&E also contacted local government officials such as the Assessor's Office, Building Department, Engineering Department, Health Department, Planning Department (which incorporates Inland Wetlands), Water Pollution Control Department, and the Fire

Marshall's Office. The objective of these records reviews, which included phone interviews and file reviews, was to attempt to obtain information indicating AOCs in connection with the site.

Task 4. Prepare ESA Report. M&E prepared an environmental site assessment report for the site summarizing the findings of the ESA. The report includes photographs, site maps and documentation to support the information provided in the ESA. The information sources used to conduct the ESA are identified in the report. The report provides a description of the site and indicates the potential presence of AOCs.

Task 5. Assist with Evaluation of CT Transfer Law Implications. M&E evaluated site-specific information with respect to the CT Property Transfer Program (PTP). M&E provided preliminary evaluation on the applicability of the PTP based on information obtained during completion of this Phase I ESA.

2.1 Assessment Objective

The purpose of this assessment is to identify AOCs and to update previous site assessments in order to refine the Phase II/III ESA currently being conducted at the site by M&E.

2.1.1 Prior Investigations

Environmental assessments and investigations of the site have been documented in the following reports:

- HRP Associates, Inc., *Site Assessment Report*, June 21, 1988.
- Advanced Environmental Interface. *Assessment of Site Environmental Conditions Report*, January 24, 1990.
- ICF Kaiser Engineers, Inc., *Underground Storage Tank Sampling Report*, December 17, 1990.
- Roy F. Weston, Inc., *Removal Program Preliminary Assessment/Site Investigation Report*, December 22, 1997.
- Roy F. Weston, Inc., International Silver co., Factory H, *Brownfields Targeted Site Assessment Final Report*, September 8, 1999.
- GZA GeoEnvironmental, Inc., *Supplemental Phase II, Environmental Site Evaluation, International Silver Company, Factory H Site, Meriden, Connecticut*, June 2000.

- Subsurface Information Surveys. *Ground Penetrating Radar Survey Results For The Investigation For The Location Of: Underground Storage Tanks & Utilities At: 77 Cooper St., Meriden, CT, July 2005.*
- Advanced Environmental Interface (AEI). *Removal Stabilization Activities Summary Report, Former International Silver Company/Insilco Factory H Site, Meriden, CT, February 2006.*

As part of the investigations listed above, soil, sediment, soil gas, and groundwater samples were collected and analyzed for site-related contaminants of concern (COCs). Metals, cyanide, volatile organic compounds (VOCs), petroleum hydrocarbons (TPH), polycyclic aromatic hydrocarbons (PAHs), and asbestos were detected on-site and are associated with several of the AOCs. Several of these constituents were detected at concentrations above Connecticut Remediation Standard Regulations criteria. Details regarding the samples and the analytical results are included in the reports listed above.

Potential and known areas of concern (AOCs) were identified in the following two reports:

- Roy F. Weston, Inc., International Silver co., Factory H, *Brownfields Targeted Site Assessment Final Report*, September 8, 1999.
- GZA GeoEnvironmental, Inc., *Supplemental Phase II, Environmental Site Evaluation, International Silver Company, Factory H Site, Meriden, Connecticut*, June 2000.

Weston (September 1999) identified 29 areas of concern (AOCs). Many of these areas have varying extents of soil and groundwater sampling associated with them. These 29 AOCs are described on Table 1 and are shown on Figure 2.

Advanced Environmental Interface, Inc. (AEI) conducted removal/stabilization activities on behalf of MidState Medical Center (MMS) and under the guidance of CTDEP. The activities were conducted in 2004-2005 to remove hazardous materials and stabilize hazardous conditions, requiring immediate action identified by CTDEP, at the former International Silver Company/Insilco Factory H site. The Removal/Stabilization Activities Summary Report (AEI, February 2006) presents these activities. The types and quantities of materials identified for removal/stabilization during this project were generally based on the following reports, which at that time were the most recent environmental investigation reports for the site:

- Roy F. Weston, Inc., September 9, 1999: International Silver Co., Factory H, Brownfields Targeted Site Assessment Final Report, Prepared for U.S. EPA Region I Office of Site Remediation and Restoration; and
- GZA GeoEnvironmental, Inc., June 2000: Supplemental Phase II Environmental Site Evaluation, International Silver Company, Factory H Site, Meriden, Connecticut.

The removal/stabilization activities conducted at the Factory H site included (as quoted from the AEI Summary Report (February, 2006)):

- (1) *demolition, removal and disposal of a dilapidated smokestack at the former boiler house (Building C);*
- (2) *removal and disposal of metal-laden dust piles beneath former cyclone dust collectors adjacent to the main building (Building A);*
- (3) *removal and disposal of metals-impacted surface soils beneath/adjacent to the dust collectors and in two areas on the east side of Harbor Brook, and installation of a 2-ft.-thick cover of two-inch process stone over the excavated areas;*
- (4) *assessment of the presence of potential/suspected underground storage tanks (UST) suggested by prior investigation, via ground penetrating radar and test pits;*
- (5) *removal and disposal of the contents of USTs identified on the site (a sump pit, two 20,000-gal. fuel oil tanks, a 10,000-gal. waste water tank, a 275-gal. gasoline tank, and a 1,000-gal. kerosene tank);*
- (6) *removal and disposal of the 10,000-gal. waste water UST;*
- (7) *removal and disposal of the 275-gal. gasoline UST;*
- (8) *removal and disposal of assorted containers of hazardous or potentially hazardous materials;*
- (9) *removal and disposal of several piles of impacted soil and debris (some including asbestos, metals and petroleum-related compounds, and fire debris);*
- (10) *removal and disposal of several piles of asphalt and debris;*
- (11) *removal and disposal of asbestos-impacted soil beneath steam lines between Buildings A and C;*

- (12) *removal and disposal of friable asbestos insulation that had fallen, or that was a risk of falling, to the floor in the former transformer/electrical house (Building B), the boiler house (Building C), and in certain locations of the main building (Building A), and to the ground surface outside the buildings;*
- (13) *removal and disposal of lead-based paint that had fallen, or that was at risk of falling, to the floor in Buildings B and C and in certain locations in Building A;*
- (14) *removal and disposal of non-friable asbestos-containing building materials found on the adjacent ground surfaces and inside Buildings A, B, and C, as well as roofing material removed from the two 20,000-gal. fuel oil USTs bunker on the east side of Building C;*
- (15) *removal and disposal of accessible metal-laden dust residue from the dust collectors adjacent to Building A;*
- (16) *removal and disposal of certain dilapidated overhead metal duct work between Building A and the dust collectors, and between Building C and the smokestack;*
- (17) *removal of certain sections of the dilapidated roof of Building C;*
- (18) *installation of plywood over open entrances (door and windows) to Building A;*
- (19) *installation of a chain-link fence around Building C;*
- (20) *repair and re-installation of certain portions of a chain-link fence around Buildings A and B;*
- (21) *securing of boiler doors and openings in Building C via spot welding;*
- (22) *encapsulation of certain remaining asbestos-containing materials on the boiler in Building C;*
- (23) *removal and disposal of metal window frames with asbestos-containing glazing from Building C;*
- (24) *installation of plywood barriers over certain open second and third floor entrances (doors/openings) to the fire-damaged areas and elevator shafts in Building A;*
- (25) *removal of brush and trees around the perimeter of Buildings A, B, and C and in work areas as required; and*

- (26) *sealing certain pipe penetrations (via versi-form) that were exposed during work activities on the east wall of Building A, on the first floor of Building C, and on the Harbor Brook retaining wall.*

These stabilization/removal areas were assigned labels of “Stabilization Area” A through W (SA-A to SA-W). Four additional AOCs (#30 to #33) were added to the list of Phase II AOCs by M&E. M&E determined that these additional AOCs would more appropriately describe environmental concerns at the site. These stabilization areas and AOCs are described on Table 1 and are shown on Figure 2. As shown on Table 1, several of the stabilization areas overlap with some of the previously-identified 29 AOCs. Some confirmatory soil sampling was conducted for the stabilization/removal areas, SA-E, SA-H, SA-G (AOC-3), SA-J (AOC-4), and SA-R (AOC-19).

Currently, M&E is conducting a Phase II/III ESA at the site to further evaluate the AOCs described above.

2.1.2 Deviations from ASTM Standard

Deviations

- The Phase I ESA focused on the accessible portions of the site only. The interior of Building A was not evaluated.
- Former owners/site staff were not available for interview. However, two owners of neighboring properties and a regulatory official, Mr. Ray Frigon of CTDEP, were interviewed.

Data Gaps

- No significant data gaps were identified that hindered the ability to identify AOCs outside of Building A. However, additional Phase II/III testing is being conducted on-site to further evaluate the AOCs identified on Table 1 of this report. In addition, the environmental quality of soil and groundwater beneath Building A will be evaluated following the future demolition of Building A.

3.0 Site Background

3.1 Location and Description of General Vicinity of Site

The site is located at 77 Cooper Street and 104 Butler Street in the City of Meriden, New Haven County, Connecticut (Figure 1). The approximate site boundary is shown on Figure 2. The site is located in an area of mixed commercial, industrial, and residential land use. Properties adjacent to the site include both commercial and residential. The site is bordered by railroad tracks and Cherry Street residences to the east; commercial establishments, Harbor Towers and Hanover Towers to the north; Louie's Auto Garage and Cooper Street to the south/southeast; and the former Veteran's Memorial Medical Center and Cook Avenue residences to the west. A Yankee Gas natural gas facility and residential properties are located to the south of the site, across Cooper Street.

3.2 Regional Geology/Hydrogeology

According to the Bedrock Geological Map of the Meriden Quadrangle of Connecticut (USGS, 1985), bedrock beneath the site is identified as New Haven Arkose, a sandstone. The Surficial Materials Map of Connecticut identifies the overburden as mixtures of gravel and sand (CTDEP, 1992).

According to the Water Classification Map of Connecticut (CTDEP, 1993), groundwater at the site is classified as GB groundwater. Class GB groundwater is presumed to have been degraded by past urban or industrial activities and may not be suitable for human consumption without treatment. Flow direction was estimated by Weston (1999). On the eastern portion of the site, groundwater is estimated to flow in a southwesterly direction towards Harbor Brook. Conversely, on the western portion of the site, groundwater is estimated to flow in a southeasterly direction towards Harbor Brook. There are no known potable water supply wells within 500 feet of the site (EDR report, February 23, 2006).

3.3 Surface Water

The site is bisected by Harbor Brook, which connects to the Quinnipiac River. Harbor Brook has a B surface water classification (CTDEP, 1993). A B surface water classification indicates that the water may be a suitable fish and wildlife habitat.

3.4 Description of Site

Figure 2 contains a site plan and Appendix 3 contains photographs of the site taken during the M&E site visit. The site is approximately 7.2 acres in size and bisected by Harbor Brook. The area of the site west of Harbor Brook and approximately 50% of the area of the side east of Harbor Brook is located within the 100-year flood plain and is zoned for manufacturing uses. The site is currently abandoned and fenced. The current owner is listed as BL&A Associates LTD Partnership of St. James, New York.

Three buildings, constructed from approximately 1886 to 1947, are present on the site: Building A (Factory H) is a 100,000+ FT² multi-story former manufacturing structure; Building B is a 900 FT² former transformer/electrical house; and Building C is a 7,200 FT² former power plant. There are several additional structures, including a footbridge and water tower, on the site. A fourth building (Building D), formerly on the northeast portion of the site, was destroyed by fire and demolished circa 1980. Initially a gun manufacturing shop, Building D housed a machine shop, a foundry, and a pattern shop. Building A resides to the west of the brook, while Buildings B and C are east of the brook. The remainder of the eastern side of the brook is primarily a cleared space. Approximately 25 cyclone-like dust collectors are situated along the east side of Building A. The dust collectors collected metal dust from the former silverware manufacturing operations.

The site is connected to municipal water and sewer service, which are currently inactive. Underground natural gas, electric, and telephone utilities are on-site. The active underground gas lines are located in the vicinity of the brook; one buried gas line is located on each side of the brook. The buried gas line veers in a northeasterly direction away from the brook on the northern portion of the site, and in a direction approximately towards the apartment complex situated north of the site.

4.0 Site History

4.1 General Site History and Site Operations

The site and site history was described in the Brownfields Targeted Site Assessment Final Report (Weston, September 1999) and Supplemental Phase II Environmental Site Evaluation (GZA, June 2000).

The site was used for a variety of industrial and manufacturing purposes from the late 1800s until approximately mid-1970s, at which time the property was vacated. Industrial processes historically conducted on the site included silverware manufacturing (e.g. International Silver Company) and gun manufacturing (e.g. Parker Brothers). Processes included casting, plating, machining, trimming, polishing, buffing, forging, storage, and shipping. The property has remained vacant since the late 1970s, and is currently abandoned.

Factory H is known to have used alkali soaps, sulfuric acid, oils, nickel, silver, chromium, copper, zinc, acid and alkali solutions, and halogenated and non-halogenated solvents. Other constituents of concern (COCs) on the site include, but may not be limited to, asbestos, other metals (including lead), cyanide, PCBs, total petroleum hydrocarbons, and volatile and semi-volatile organic compounds. Several COCs were detected at concentrations exceeding the Connecticut Remediation Standard Regulations (RSRs).

4.2 Sanborn Maps

M&E reviewed Sanborn Fire Insurance Maps from 1884, 1891, 1896, 1901, 1950, 1953, and 1971 for the site. A brief description of site occupants/operations for each map is provided below:

1884 Sanborn Map

- The C. Rogers and Bros. Silverware Manufacturers facility is operating on the western portion of the site, west of the brook. Industrial operations include silverware manufacturing, specifically consisting of plating, machining, packing, and shipping. Coal and kerosene are utilized as fuel sources. The facility is shown in the area of the older portion of Building A.
- Parker Bros. Machine Shops and Gun Factory facility is operating on the eastern portion of the site, east of the brook. Industrial operations include gun manufacturing, specifically consisting of a foundry and machining activities. Light gasoline and coal are utilized on-site. The facility is shown in the area of Building D.
- The Bradley & Hubbard Manufacturing Company industrial complex is located on the adjacent property to the north of the Parker Bros. facility. Brass foundry is a listed industrial activity. The facility traverses Harbor Brook.

1891 Sanborn Map

- The C. Rogers and Bros. Silverware Manufacturers facility is operating on the western portion of the site, west of the brook. Similar industrial operations and fuel sources are shown. However, an old gasometer is shown on-site. The footprint of the facility appears to have increased in area since 1884.
- Parker Bros. Machine Shops and Gun Factory facility is operating on the eastern portion of the site, east of the brook. Similar industrial operations are shown. Crude oil has been added as a fuel source. The footprint of the facility appears to be similar in area since 1884. The site is serviced by city water.
- A gasometer facility is located across Cooper Street to the south of the site.

1896 Sanborn Map

- The C. Rogers and Bros. Silverware Manufacturers facility is operating on the western portion of the site, west of the brook. Similar industrial operations and fuel sources are shown. The footprint of the facility appears to have increased in area since 1891 to include several different departments. The names and descriptions of these departments are illegible.
- The facility name of the Parker Bros. Machine Shops and Gun Factory facility was changed to “Parker Bros. Gun Shops.” Similar industrial operations and fuel sources are shown, with the exception of the addition of forging. The footprint of the facility appears to be similar in area since 1891.

1901 Sanborn Map

- The C. Rogers and Bros. Silverware Manufacturers facility is operating on the western portion of the site, west of the brook. Similar industrial operations and fuel sources are shown. The footprint of the facility appears to be similar in area since 1896.
- The facility name of the Parker Bros. Gun Shops was changed to “Chas. Parker Co. Gun Department”. Similar industrial operations and fuel sources are shown. The footprint of the facility appears to be similar in area since 1896. However, a rifle range has been added to the site.

1950 Sanborn Map

- The C. Rogers and Bros. Silverware Manufacturers facility name has been changed to “The International Silver Co. Factory H”. The footprint of the facility appears to have

significantly increased in area since 1901. The most substantial increase in building size occurred in the southern portion of this portion of the property. Building B, spanning the brook, is also shown.

- The Chas. Parker Co. Gun Department facility name has been changed to “The International Silver Co. Factory H”. The footprint of the Building D facility appears to be similar in area since 1901. However, a boiler house, known as Building C, is present to the west of Building D. The oil storage tank bunker is shown adjacent to the boiler house. The site is shown to be serviced by public utilities.
- Several commercial buildings appear to be present to the north of the western portion of the site. One is labeled “steam laundry.”

1953 Sanborn Map

- The mapping has not changed significantly.

1971 Sanborn Map

- The mapping has not changed significantly.

4.3 Historical Aerial Photographs

Aerial Photographs of the area were obtained for the years of 1934, 1940, 1951, 1965, 1970, 1975, 1980, 1986, 1992, and 1995. A brief description of site features observed in each photo is provided below.

1934 Aerial Photo

The northern portion of Building A, as well as Building D, are shown on the property. In addition, there appears to be a large concrete pad on the eastern side of Harbor Brook. An industrial facility (Bradley & Hubbard manufacturing facility) is located to the north of Building D. The utility company site located to the south of Cooper Street is developed.

1940 Aerial Photo

The southern portion (sawtooth roof) portion of Building A is present. In addition, Building C is present.

1951 Aerial Photo

Buildings A, C, and D are distinguishable in the photograph and appear similar to present day configuration.

1965 Aerial Photo

Buildings A, B, C, and D are shown on the property. Parking lots are shown to the north and south of Building C. The outdoor cyclone dust collectors associated with Building A are visible. The water tower, former smokestack, and heating system conveyance structure are shown. An outdoor storage area or debris pile appears to be present north of Building D.

1970 Aerial Photo

The features shown in the 1970 aerial are similar to what was shown in the 1965 aerial. However, there appears to be a second footbridge over Harbor Brook, south of Building B. The industrial facility (Bradley & Hubbard manufacturing facility) located to the north of Building D is still present.

1975 Aerial Photo

Buildings A, B, C, and D are shown on the property in this photo. The features shown in the 1975 aerial are similar to what was shown in the 1970 aerial. Hanover and Harbor Towers are present on the adjacent property to the north of the Factory H site, where the former Bradley & Hubbard industrial facility resided.

1980 Aerial Photo

Buildings A, B, C, and D are shown on the property. The amount of vegetation appears to have increased on the eastern side of Harbor Brook.

1986 Aerial Photo

Buildings A, B, and C are shown on property. Building D has been demolished.

1992 Aerial Photo

This photo is similar to the 1986 aerial. However, additional vegetation is shown on the site.

1995 Aerial Photo

This photo is similar to the 1992 aerial.

4.4 Historical Topographic Maps

Historical topographic maps for the site were obtained from the USGS for the years 1955, 1967, 1972, 1976, 1984, and 1992. The 1955 map shows the footprint of Factory H (Building A) as well as the former Parker Bros. Gun Works (Building D). The remaining maps do not show any buildings on the property. All other topographical features appear to be the same for all years.

5.0 Regulatory Agency Database Review

5.1 Description of Databases Reviewed

Environmental Data Resources (EDR) conducted a regulatory database review for the subject property and surrounding areas. A copy of the EDR report is provided in Appendix 4. This report discusses only facilities identified by EDR which are within the radii indicated below. All search radii are from the approximate location of the center of the site. The following database searches were conducted by EDR.

- **National Priority List (NPL)** for sites within a 1 mile radius of the subject facility. The NPL identifies sites for priority clean-up under the Superfund Program.
- **Proposed National Priority List (Proposed NPL)** for sites within a 1 mile radius of the subject facility. The Proposed NPL identifies sites proposed for the National Priority List.
- **Delisted NPL Sites** for sites within 1-mile radius of the subject site. Delisted NPL sites meet the criteria contained in the National Contingency Plan which EPA uses to delete sites from the NPL.
- **National Priority List Liens (NPL Liens)** for the subject facility. The NPL Liens identifies facilities for which the USEPA has filed liens against real property to recover remediation costs or potential liability costs.
- **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)** for sites within a ½ mile radius of the subject facility. CERCLIS contains sites which are either proposed to be or are on the NPL, and sites which are in the screening and assessment phase for possible inclusion on the NPL.

- **"CERCLIS No Further Remedial Action Plan" (NFRAP) Sites** for sites within a ½ mile radius of the subject facility. NFRAP sites, which have been removed from CERCLIS, may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.
- **RCRA Corrective Action Activity (CORRACTS)** for sites within a 1-mile radius of the subject facility. CORRACTS identifies RCRA facilities performing corrective action activities.
- **RCRA TSD** for sites within a ½ mile radius of the subject facility.
- **RCRA Lg. Quan. Gen.** for sites within a ¼ mile radius of the subject facility.
- **RCRA Sm. Quan. Gen.** for sites within a ¼ mile radius of the subject facility.
- **Emergency Response Notification System (ERNS)** for the subject facility. ERNS contains information on reported releases of oil and hazardous substances.
- **Comprehensive Environmental Response, Compensation, and Liability Act Consent Decrees (CONSENT)** for sites within a 1 mile radius of the subject facility. Major legal settlements for clean-up of NPL sites are released periodically by the US District Courts.
- **Facility Index System (FINDS)** searches various federal and state databases for the subject facility.
- **Hazardous Materials Information Reporting System (HMIRS)** for the subject facility. The HMIRS contains hazardous material spill incidents that are reported to the U.S. Department of Transportation.
- **Engineering Controls Sites List (US ENG CONTROLS)** for sites within a ½ mile radius of the subject facility. A listing of sites with engineering controls in place.

- **Sites with Institutional Controls (US INST CONTROL)** for sites within a ½ mile radius of the subject facility. A listing of sites with institutional controls in place.
- **Department of Defense Sites (DOD)** for sites within a 1 mile radius of the subject facility. A listing of federally owned or administered lands, administered by the DOD, that have any area equal to or greater than 640 acres of the U.S., Puerto Rico, or the Virgin Islands.
- **Formerly Used Defense Sites (FUDS)** for sites within a 1 mile radius of the subject facility. A list of Formerly Used Defense Sites properties where the US Army Core of Engineers is actively working or will take necessary actions.
- **Listing of Brownfields Sites (US BROWNFIELDS)** for sites within a ½ mile radius of the subject facility. A listing of brownfields sites.
- **Records of Decision (ROD)** for sites within a 1 mile radius of the subject facility. Records of Decision mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.
- **Uranium Mill Tailings Sites (UMTRA)** for sites within a ½ mile radius of the subject facility.
- **Open Dump Inventory (ODI)** for sites within a ½ mile radius of the subject facility. An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D criteria.
- **Toxic Chemical Release Inventory System (TRIS)** for the subject facility. The TRIS database identifies facilities which release toxic chemicals to the air, water and land in quantities reportable under SARA Title III, Section 313.
- **Toxic Substances Control Act (TSCA)** for the subject facility. The TSCA database identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list.

- **Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)/TSCA Tracking System (FTTS)** for the subject facility. FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA, and EPCRA.
- **Section 7 Tracking Systems (SSTS)** for the subject facility. List of all registered pesticide-producing establishments.
- **PCB Activity Database System (PADS)** for the subject facility. The PADS database identifies generators, transporters, commercial stores and/or brokers and disposers of PCBs who are required to notify the USEPA.
- **Material Licensing Tracking System (MLTS)** for the subject facility. The MLTS contains facilities subject to licensing by the Nuclear Regulatory Commission (NRC).
- **Mines Master Index File (MINES)** for sites within a ½ mile radius of the subject facility. Contains all mine identification numbers issued for mines active or opened since 1971.
- **RCRA Administrative Action Tracking System (RAATS)** for the subject facility. RAATS contains records on enforcement actions, administrative and civil actions issued under RCRA.
- **Leaking Underground Storage Tanks** for sites within a ½ mile radius of the subject property. The LUST records contain an inventory of reported leaking underground storage tank incidents.
- **Underground Storage Tank** data for sites within a ¼ mile radius of the subject property. Registered USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program.
- **State Hazardous Waste Sites** for sites within a 1 mile radius of the subject facility. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list.

- **Site Discovery and Assessment (SDA) Database** for sites within a ½ mile radius of the subject facility. All sites reported to Permitting, Enforcement, and Remediation Division where it is suspected that hazardous waste may have been disposed or sites that are eligible for listing on the State Inventory of Hazardous Waste Disposal.
- **State Landfill Sites** for sites within a ½ mile radius of the subject facility. State landfill site records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. These may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.
- **Recycling Facilities (SWRCY)** for sites within a ½ mile radius of the subject facility. A list of recycling facilities.
- **Leachate and Waste Water Discharge Sources (LWDS)** for the subject site. This inventory of locations from the Leachate and Wastewater Discharge Source maps is compiled by the State of Connecticut. These maps locate discharges that have received a wastewater discharge permit from the state, historic waste sites, or locations of accidental spills, leaks, or other discharges.
- **Marine Terminals and Tank Information (AST)** for sites within a ¼ mile radius of the subject facility. A listing of bulk petroleum facilities that receive petroleum by a vessel.
- **CT Property** for the subject facility. This list is compiled by the State of Connecticut, and identifies properties listed in the Property Transfer Files with the State of Connecticut Department of Environmental Protection.
- **CT Spills** for the subject property. This database compiled by the State of Connecticut Department of Environmental Protection Oil and Chemical Spills Section, identifies reported oil and chemical spills in the State of Connecticut.
- **Brownfields** for sites within ½-mile radius of the subject property. Brownfields Inventory.

- **Enforcement Case Listings (ENF)** for sites within ½ mile radius of the subject property. Types of Enforcement Actions.
- **INST CONTROL** for sites within a ½ mile radius of the subject facility. Environmental Land Use Restriction Sites.
- **Voluntary Remediation Sites (VCP)** for sites within a ½ mile radius of the subject facility. Sites involved in the Voluntary Remediation Program.
- **INDIAN RESERV** for sites within a 1 mile radius of the subject facility. A list of Indian Reservations.

5.2 Summary of Database Findings

Of the database searches listed above, the subject site was identified in the LWDS, Brownfields, and SDA databases. In addition, files for the site were also found in CTDEP Spills (See Section 6.3). Facilities located in government databases within the radius search area of the site are listed in Table 2. Each site listed includes the name, address, location in relation to the site, and the databases identified. The location of neighboring sites with respect to general groundwater flow trends is also included. It is assumed that groundwater at the site flows toward the Harbor Brook; on the eastern portion of the site the groundwater flows to the west, while on the western portion of the site, groundwater flows to the east. Detailed information on the sites listed is included in the EDR report (Appendix 4).

Of the database searches listed above, twenty-two “Orphan Sites” were identified in the region. Orphan Sites are sites contained in one or more of the databases, which were not located by EDR due to poor or insufficient address information. Further details may be found on page 96 of the attached EDR report.

6.0 State File Review

M&E visited the public file room of the CTDEP in Hartford to review available files containing pertinent environmental information on the Factory H property and properties abutting the site. A brief summary of each of the records reviewed is provided below.

6.1 Pollution Abatement Order (PAO)

A PAO was issued by CTDEP (Order SRD-081) in 1997 to BL&A regarding contamination at the site. An escrow account was then established by BL&A to conduct stabilization activities at the site to address environmental conditions, which required immediate attention. CTDEP provided oversight of the account and how the funds were to be spent regarding the implementation of the stabilization actions (Ray Frigon, 2006). Stabilization actions were conducted (AEI, 2006) in 2005.

6.2 Notices of Violation

The site is not identified in the CTDEP Notices of Violation (NOV) files for Meriden.

6.3 Spill Reports

Spill records were reviewed at the CTDEP. On several occasions spills were reported at, or in the vicinity of, the site. The following are spill reports were filed for the site and abutting properties:

- Prior to 1990 (December 1974 to November 1987), several Oil & Chemical Spill Reports were filed for Harbor Brook, in the vicinity of the site, regarding minor spills or observed sheens on Harbor Brook. The source(s) of the sheens were unknown.
- Yankee Gas at 56 Cooper Street (February, 1995) – An underground storage tank, containing gasoline, failed a tightness test. An investigation was to be conducted by Yankee Gas. The Yankee Gas site is located down-gradient of the Factory H site and a release would not be suspected to affect the Factory H site.
- Cooper Street Bridge/Harbor Brook (May, 1995) – An oily sheen on the surface of Harbor Brook was observed and reported. The source of the sheen was attributed to storm runoff. No corrective actions were taken and the case remained open.
- Meriden Veterans' Hospital (February, 1998) – Less than 25 gallons of #6 fuel oil was spilled onto the ground due to a hose failure. It was cleaned up with absorbant pads, and the case was closed.

6.4 USTs/LUSTs

The site is not identified in either the CTDEP UST or LUST databases. However, according to Weston (1999), an estimated twelve USTs were reportedly located on the property. Detailed information regarding the size, contents, and locations of many of the USTs was not available. However, the following USTs were identified:

- two 20,000-gal. fuel oil tanks, near the eastern side of Building C (AOC-1)
- one 1,000-gal. kerosene tank, near the southeastern corner of Building A (AOC-2)
- one 10,000-gal. waste water tank, situated on the eastern side of Harbor Brook near Building B (AOC-3)
- one 275-gal. gasoline UST, near the southern side of Building C (AOC-4)
- two USTs of unknown size, located between Building A and Harbor Brook (AOC-5)
- five potential USTs of unknown size, located between Building A and Harbor Brook (AOC-6)
- Potential UST of unknown size, located just east of the former Building D (AOC-24)

As part of the CTDEP stabilization activities conducted in 2005, the following UST removal activities were conducted:

- assessment of the presence of potential/suspected underground storage tanks (UST) suggested by prior investigation, via ground penetrating radar and test pits
- removal and disposal of the contents of USTs identified on the site as follows:
 - two 20,000-gal. fuel oil tanks, near the eastern side of Building C (AOC-1)
 - one 1,000-gal. kerosene tank, near the southeastern corner of Building A (AOC-2)
 - one 10,000-gal. waste water tank, situated on the eastern side of Harbor Brook near Building B (AOC-3)
 - one 275-gal. gasoline tank, near the southern side of Building C (AOC-4)
- removal and disposal of the 10,000-gal. waste water UST (AOC-3)
- removal and disposal of the 275-gal. gasoline UST (AOC-4)

In addition, USTs/LUSTs were reportedly located on several abutting properties. These properties are listed on Table 2. The down-gradient Yankee Gas site had a gasoline LUST. The LUST was abandoned and a soil vapor extraction system was operated on the site in the mid-1990s. Three USTs located on the nearby Hanover Towers site, located at 76 Butler Street, were excavated and the UST facility was closed. A #2 fuel oil spill was reported, followed by subsequent removal of contaminated soil (EDR report).

Six ASTs, including a 150,000 gallon water tower, were present on the site. All of the ASTs, except for the water tower, were removed, pumped out, or were determined to contain water.

6.5 RCRA/Hazardous Waste Files

The site is identified in the CTDEP hazardous waste files for Meriden, Connecticut. Order No. SRD-037, issued by the CTDEP in 1992, required Insilco Corporation, the property owner at that time, to hire a consultant to perform an investigation of solid waste and all other wastes on the property with respect to soil, groundwater, and surface water pollution. Furthermore, the Order stipulated that the owner was to conduct remedial actions to address site contamination and perform subsequent monitoring to determine the effectiveness of the remediation efforts. No information was available regarding the status of this Order.

6.6 CECRLA/Superfund Files

The site is not identified in the CTDEP superfund files for Meriden, Connecticut.

6.7 Solid Waste Files

The site is identified in the CTDEP solid waste files for Meriden, Connecticut.

6.8 Water/Wastewater Files

The site is identified in the CTDEP water/wastewater files for Meriden, Connecticut. Copies of the following previous investigations were on file at CTDEP for the site:

- Advanced Environmental Interface. *Assessment of Site Environmental Conditions Report*, January 24, 1990.
- Roy F. Weston, Inc., International Silver co., Factory H, *Brownfields Targeted Site Assessment Final Report*, September 8, 1999.
- GZA GeoEnvironmental, Inc., *Supplemental Phase II, Environmental Site Evaluation, International Silver Company, Factory H Site, Meriden, Connecticut*, June 2000.
- Subsurface Information Surveys. *Ground Penetrating Radar Survey Results For The Investigation For The Location Of: Underground Storage Tanks & Utilities At: 77 Cooper St., Meriden, CT*, July 2005.
- Advanced Environmental Interface (AEI). *Removal Stabilization Activities Summary Report, Former International Silver Company/Insilco Factory H Site, Meriden, CT*, February 2006.

6.9 PCB Files

A location along Harbor Brook at the American Legion on Hanover Road is identified in the CTDEP PCB files. An oily sheen was observed in part of the brook, located downstream of the Factory H site on November 19, 1998. The location appeared to be related to a site use in the vicinity of the sample location. A soil sample was obtained by CTDEP along the brook and analyzed for PCBs, TPH, and PAHs. While the sample yielded detections for TPH and PAHs, no PCBs were detected. Therefore, the CTDEP PCB Program closed the case and referred the file to the Oil & Chemical Spills Department and the Water Enforcement Bureau.

6.10 Natural Diversity Database

The CTDEP Natural Diversity Database mapping (CTDEP, 2005) indicates that the site does not contain habitat and/or known sitings of threatened, endangered, or other critical species.

6.11 Price & Lee's City Directory

The Price & Lee's City Directory were reviewed through EDR. The Factory H site did not appear in the Directory. Street indices for 1948 (the earliest available through EDR), 1952, 1956, 1961, and 1967 (the latest on file through EDR) were reviewed. Records for Cooper Street were reviewed for each year.

- 1948: Properties listed appear to be commercial, residential, and utility.
- 1952: Properties listed appear to be commercial, residential, and utility.
- 1956: Properties listed appear to be commercial, residential, and utility.
- 1961: Properties listed appear to be commercial, residential, and utility.
- 1967: Properties listed appear to be commercial, residential, and utility.

7.0 Local Agency Records

Local agencies were contacted via telephone and visited on February 27, 2006 by M&E personnel to identify records of environmental concerns for the subject site. The local agencies contacted and the information they provided is as follows:

- ◆ The Fire Marshal's Office for the City of Meriden was contacted by telephone and visited by M&E personnel. No records regarding USTs were on file. The Office did have some correspondence on file regarding a spill on site that occurred in May 1995. The spill was oil product observed floating in Harbor Brook and emanating from a stream bank. The incident was referred to CTDEP.

- ◆ The Building Department for the City of Meriden was contacted by telephone and visited by M&E personnel. The Building Department had three permits on file for the site including: permit for installation of 700' of chain link fence, filed by BL&A; permit for demolition of a smokestack in July 2004, filed by Earth Technology, Inc.; and an electrical permit, filed by Schultz Electric, Inc. in April 2005. These permits were filed as part of the CTDEP removal/stabilization actions conducted in 2004-2005. No records regarding violations or environmental concerns were found for the site.
- ◆ The Planning Department for the City of Meriden was contacted by telephone and visited by M&E personnel. No records regarding violations or environmental concerns were on file for the site.
- ◆ Inland Wetlands files consisted of a Meriden Inland Wetlands and Watercourse Commission Agenda and a permit application by AEI Environmental to conduct CTDEP stabilization/remediation work within the 50 foot upland review area.
- ◆ The Engineering Department for the City of Meriden was contacted by telephone and visited by M&E personnel. Correspondence and a report documenting CTDEP remediation (stabilization) efforts in June 2005 were on file for the site.
- ◆ The Health Department for the City of Meriden was contacted via telephone. No environmental concerns were on file for the site.
- ◆ The Water Pollution Control Department was contacted by telephone regarding sewer records. No records related to the Factory H site were provided by the Water Pollution Control Department.

8.0 User Provided Information

Copies of the Weston (1999) and GZA (2000) reports were provided to M&E by the City of Meriden. These reports are also available at CTDEP.

9.0 Site Reconnaissance and Interviews

M&E conducted a visual reconnaissance of the facility on March 7, 2006. During this site visit, M&E performed a site inspection and reviewed the environmental conditions of the site. Observations from the site visit are noted on Figure 2 and photographs are included in Appendix 3.

9.1 Site Utilities

The site is connected to municipal water and sewer service, which are currently inactive. Underground natural gas, electric, and telephone utilities are on-site. The active underground gas lines are located in the vicinity of the brook; one buried gas line is located on each side of the brook. The buried gas line veers in a northeasterly direction away from the brook on the northern portion of the site, and in a direction approximately towards the apartment complex situated north of the site. No records of on-site septic, except for the reported dry well (Weston, 1999), were found.

9.2 Storage Tanks

9.2.1 Above-Ground Storage Tanks

With the exception of the 150,000 gallon water tower, no above-ground storage tanks (ASTs) were observed on-site during the site reconnaissance. However, ASTs were historically present on site and contents of ASTs were removed during the 2005 CTDEP removal actions (AEI report, 2006).

9.2.2 Underground Storage Tanks

Refer to section 6.4 for a discussion of USTs.

9.3 Hazardous Substances and Petroleum Products Storage

Based on visual observation during the site visit, no containers of hazardous material appeared to be present on site.

9.4 Waste Generation

Historically, alkali soaps, oils, copper, chromium, zinc, nickel, silver, acid and alkali solutions, and halogenated and non-halogenated solvents have been generated at the site as part of industrial activities and discharged to the sanitary sewer and Harbor Brook. However, the industrial operations at the site were reportedly discontinued prior to 1980.

9.5 Asbestos-Containing Materials

M&E did not conduct any inspection, inventory, survey, or sampling for asbestos containing material (ACM) as part of this assessment. However, ACM has been identified in Buildings A, B, and C, and on the steel-framed heat-transfer conveyance structure in the central portion of the site (GZA, 2000; CTDEP, 2005). As part of the CTDEP removal/stabilization activities, ACM was removed from the 2nd and 3rd floors of Building A. ACM soils were also removed from beneath the conveyance structure and from a pile near Building C, and disposed of off-site.

9.6 Lead-Based Paint

M&E did not conduct any inspection, inventory, survey, or sampling for lead-based paint (LBP) as part of this assessment. However, LBP was identified in Building A (GZA, 2000).

9.7 PCBs

M&E did not conduct any detailed inspection, inventory, survey, or sampling for PCBs in building materials as part of this assessment. However, potential sources of PCBs, including light ballasts (Building A – AOC-29), paints, and transformers (Building B – AOC-32), were identified (GZA, 2000). No oil stains or releases were observed during a visual inspection of the interior of Building B. No indications of a release of transformer oil were observed. In addition, surficial soils (to a depth of 2.5 FT) in the vicinity of Building B were removed and disposed off-site during the 2005 stabilization activities.

9.8 Neighboring Properties

Site reconnaissance included the visual inspection of neighboring properties; however, M&E personnel conducted the inspections without entering neighboring properties. Site reconnaissance did not visually identify significant environmental concerns on properties in the vicinity of the subject site. However, Louie's Autobody garage (AOC-30), adjacent to the southeastern portion of the site may be a potential source of contamination. In addition, the Yankee Gas facility, located across Cooper Street to the south of the site, reportedly has had releases of contamination on-site. However, the Yankee Gas property is located downgradient of the Factory H site and was not considered to be an AOC.

9.9 Interviews

During the course of this ESA, the following people were interviewed:

- Mr. Ray Frigon, of the CTDEP, regarding the stabilization/removal activities conducted at the site during 2005. Mr. Frigon provided details regarding the scope and nature of these activities.
- Ms. Maryellen Mordarski, Chairman of the Meriden Conservation (Land) Commission, regarding activities at the site related to environmental conditions at the site. Ms. Mordarski has been a resident for nearly 55 years at 65 Cherry Street, which is adjacent to the site. Ms. Mordarski indicated that dumping on the site and historic dumping of wastewaters into Harbor Brook may have occurred, but had no specific information concerning these issues.
- Mr. Louis Scionti, the owner of Louie's Auto Body, located at 55 Cooper Street and adjacent to the site, regarding activities related to environmental conditions at the site. Mr. Scionti stated that he does not remember any significant environmental issues related to the Factory H site. However, he did occasionally park a tow truck on the site.

10.0 Connecticut Property Transfer Act

Sections 22a-134 through 22a-134e of the CT General Statutes form the CT Property Transfer Act. This act, administered by CTDEP, requires the disclosure of environmental conditions when certain types of property are transferred. The law requires that any property considered an "establishment" must file the appropriate Property Transfer Forms with the CTDEP. An "establishment" is defined as any real property at which any of the following occurred:

- ◆ On or after November 19, 1980, more than 100 kilograms (220 pounds) of hazardous waste were generated in any one month (except as the result of remediation activities);
- ◆ Hazardous waste generated by another person or municipality at another site was recycled, reclaimed, reused, stored, handled, treated, or disposed;
- ◆ The process of dry cleaning was conducted on or after May 1, 1967;
- ◆ Furniture stripping was conducted on or after May 1, 1967;
- ◆ A vehicle body repair shop or vehicle painting shop is or was located on or after May 1, 1967.

A review of the available information for the site did not identify any dry cleaning, furniture stripping, or vehicle body repair/painting activities occurring at the site after May 1, 1967. The facility is not a registered hazardous waste generator.

Based on the information reviewed by M&E and summarized above, the site does not appear to meet the criteria of an "establishment". However, M&E recommends that environmental legal counsel be consulted to fully evaluate the applicability of CT Property Transfer Law to this site.

11.0 Conclusions

11.1 Findings and AOCs

From the work described herein, M&E has identified a list of AOCs. The attached Table 1 summarizes findings and AOCs that have been identified. Figure 2 shows the locations of these AOCs. These AOCs can be further summarized as follows:

1. Potential discharges from USTs may have resulted in impacts to soil, groundwater, and the brook sediments. Potential COCs are ETPH, VOCs, PAHs, cyanide, and metals. The following USTs were identified:
 - two 20,000-gal. fuel oil tanks, near the eastern side of Building C (AOC-1)
 - one 1,000-gal. kerosene tank, near the southeastern corner of Building A (AOC-2)
 - one 10,000-gal. waste water tank, situated on the eastern side of Harbor Brook near Building B (AOC-3)
 - one 275-gal. gasoline UST, near the southern side of Building C (AOC-4)
 - two USTs of unknown size, located between Building A and Harbor Brook (AOC-5)
 - five potential USTs of unknown size, located between Building A and Harbor Brook (AOC-6)
 - Potential UST of unknown size, located just east of the former Building D (AOC-24)

2. Potential discharges from above-ground storage tanks (ASTs) may have resulted in impacts at the site. Six ASTs (AOCs 7-10), including a 150,000 gallon water tower, were present on the site. However, all of the ASTs, except for the water tower, were reportedly removed, pumped out, or were determined to contain water. No information regarding the water tower was obtained.

3. In the 1990s, several 55-gallon drums, containing unidentified waste, were observed to be staged on the exterior of Building A on the southwestern portion of the site. This was identified as AOC-11. COCs are VOCs, TPH, and metals.

4. Potential discharges and/or releases from the site, other industrial/urban sources in the surrounding area, or other possible upstream sources may have resulted in impacts to sediment in the brook (AOCs-12 and 26). Sediment and surface water sampling was performed in the brook during previous field investigation work and the results of this sampling show there were no significant levels of constituents detected in the samples. However, constituents such as metals were detected. Sediment removed from the brook in the future will require further characterization. COCs include metals, PAHs, TPH, and cyanide.
5. A possible dry well (AOC-13) was reportedly located near the central portion of the eastern half of the site. Potential discharges and/or releases from the dry well may have resulted. COCs include TPH, metals, and VOCs.
6. Several debris piles (AOC-15, SA-B, SA-C, and SA-M) and stockpiles related to the CTDEP stabilization activities (SA-F and SA-I) were historically located on-site. These stockpiles have been removed. However, impacts to underlying soil and groundwater may have resulted. COCs include metals, TPH, PAHs, VOCs, and asbestos.
7. As part of the 2005 stabilization activities conducted by CTDEP at the site, several areas of metals-impacted surficial soils, including the metal dust from the cyclone dust collectors located adjacent to Building A, were excavated and disposed of off-site (AOC-14, AOC-19, SA-E, SA-H, SA-O, SA-R, and SA-S). However, confirmatory soil sampling was generally not conducted to evaluate if underlying soils were impacted.
8. A chlorinated solvent groundwater plume and associated impacted-soils (AOC-17) have been documented to be present in the northeastern corner of the site. Although soil, groundwater, and soil gas sampling has been conducted, the source of the solvents has not been adequately defined. Based on historic groundwater sampling, significant concentrations of chlorinated solvents related to this solvent plume do not appear to be widespread across the site.
9. Potential sources of PCBs, including light ballasts, paints, (Building A – AOC-29) and transformers (Building B – AOC-32), were identified at the site (GZA, 2000). Some historic testing for PCBs in soil has been conducted and indicates that a significant

release of PCBs has not occurred. However, no oil stains or releases were observed during a visual inspection of the interior of Building B. No indications of a release of transformer oil were observed. In addition, surficial soils in the vicinity of Building B were removed and disposed off-site during the 2005 stabilization activities.

10. Based on historic testing, ACM has been identified to be present in Buildings A, B, and C (AOC-27, SA-N, SA-P, SA-Q, and SA-T). Asbestos assessments have been conducted and a portion of the known asbestos hazards have been abated; however, ACM still remains in a portion of Building A and asbestos-impacted soils have been observed to be present on-site (AOC-22, SA-D). The extent of ACM in the buildings and of asbestos-impacted soil in the vicinity of the on-site buildings has not been thoroughly evaluated.
11. Based on the age of the buildings/structures and some lead-abatement work already conducted, lead-based paint is assumed to be present (AOC-10, AOC-28, SA-N, SA-Q, and SA-T). The extent of lead-impacted soil in the vicinity of the on-site buildings has not been thoroughly evaluated.
12. It is anticipated that future site remediation/redevelopment activities may potentially involve significant re-grading and management of surficial soils. Potential discharges/releases to site-wide surficial soils (AOC-31) may have occurred as a result of site operations. Site-wide surficial soils should be evaluated by utilizing existing historical soil sampling data and any new soil data that is collected as part of future investigation activities.
13. It is anticipated that future site remediation/redevelopment activities may involve an evaluation of the quality of groundwater discharging to Harbor Brook and underlying potential developable portions of the site. Potential discharges/releases to site-wide groundwater (AOC-25) may have occurred as a result of site operations. Site-wide groundwater should be evaluated by utilizing existing historical groundwater sampling data and any new groundwater data that is collected as part of future investigation activities.

14. Miscellaneous AOCs include: petroleum-stained soil adjacent to the UST bunker at Building C (AOC-18), removed during the 2005 stabilization activities; contaminated wood flooring within Building A (AOC-20); stained concrete on the exterior of the northeastern corner of Building A (AOC-21); stained soil adjacent to Building A (AOC-23) removed during the stabilization of metals-impacted soil related to AOC-19; and an autobody shop adjacent the southeastern portion of the site (AOC-30). AOC-18 and AOC-23 have been addressed as part of the 2005 removal activities. However, confirmatory soil sampling is required to evaluate potential impacts to subsurface soils. AOC-20 and AOC-21 will be addressed as part of the anticipated future building demolition. Louie's Autobody shop, just southeast of the site, represents a potential source of off-site contamination that may have impacted the southeastern corner of the site.
15. It is recommended that potentially impacted soil beneath Building A (AOC-33) be further evaluated following demolition of the building.

11.2 Data Gaps

No significant data gaps were identified that hindered the ability to identify AOCs outside of Building A. However, additional Phase II/III testing is being conducted on-site as part of a separate phase of work to further evaluate the AOCs identified on Table 1 of this report. In addition, the environmental quality of soil and groundwater beneath Building A is not known; therefore it is recommended that this soil and groundwater be evaluated following the future demolition of Building A.

11.3 Environmental Professional's Opinion

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of the Insilco Factory H property located on Cooper Street in Meriden, Connecticut. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed evidence of AOCs as identified on Table 1 and presented in Section 11.1.

Based on the observations and conclusions provided in this Phase I ESA report, it is M&E's opinion that AOCs have been identified at the site which warrants additional site investigation. AOCs identified in this Phase I ESA are included on Table 1.

11.4 Environmental Professional Statement

As required by 40 CFR 312.21, M&E declares that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in § 312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Catherine Nagel, Engineering Department

Lucas A. Hellerich, Ph.D., P.E., Senior Project Engineer

John L. Albrecht, L.E.P., Project Manager

TABLES

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
1	2 - 20,000-gallon USTs	East side of Building C	Reported to be steel construction and contained diesel fuel. Unknown installation date.	Upgradient soil boring & soil gas survey (Weston, 1998) and GPR Survey (AEI, 2005)	Contents of tanks pumped out (GZA, 2000)	No comprehensive soil or groundwater sampling has been performed in vicinity of tanks.
2	1 - 1,000-gallon UST	Southeast side of Building A	Reported to be steel construction and have contained kerosene. Unknown installation date.	No soil or groundwater data is available	Contents of tank pumped out (GZA, 2000) and empty concrete vault found	No comprehensive soil or groundwater sampling has been performed in vicinity of tanks.
3	1 - 10,000-gallon UST	Along Harbor Brook north of Building B	Reported to be steel construction and have contained metal finishing rinse and wastewater. Installed in 1970.	GPR Survey (AEI, 2005) and limited soil sampling data (CTDEP, Sept. 2005)	Tank removed in 2005	Tank was not formerly closed; however, a release from the UST does not appear to have occurred.
4	1 - UST of unknown size	South side of Building C	Contained gasoline; unknown construction and installation date.	Soil sampling of sidewalls and bottom of tank excavation (CTDEP, Sept. 2005)	Tank removed in 2005	There do not appear to be any data gaps. A release from the UST does not appear to have occurred.
5	2 - USTs of unknown size	Curbed areas along southeast side of Building A	Unknown construction, use, and installation date.	GPR Survey (AEI, 2005) No soil or groundwater data is available	1-1,000 gal UST cleaned and 1 UST grave found	No comprehensive soil or groundwater sampling has been performed in vicinity of tanks.
6	5 - USTs of unknown size	Fill pipes along northeast side of Building A	Unknown construction, use, and installation date.	Field observations GPR Survey (AEI, 2005) No tanks appeared to be present. No soil or groundwater data is available	None reported	Tanks could be beneath building. No comprehensive soil or groundwater sampling has been performed in vicinity of tanks.
7	2 - 200-gallon ASTs	Ground floor of Building C	Reported to be steel construction. Unknown use and installation date.	Observations	Reported to have been pumped out / removed (email dated 1-30-06)	None
8	1 - 1,500-gallon AST	Ground floor of Building C	Reported to be concrete construction. Unknown use and installation date.	Observations	Reported to have been pumped out / removed (email dated 1-30-06)	None
9	2 - 300-gallon ASTs	North and west side of ground floor of Building A	Reported to be concrete construction. Unknown use and installation date.	Tanks are suspected to contain water (GZA, 2000).	None reported	Tanks have unknown contents, but are suspected to contain water.
10	1 - 150,000-gallon AST (Water tower)	South of Building C	Reported to be steel construction. Unknown installation date.	None	None reported	Presence of lead paint in surficial soils in vicinity of water tower is unknown

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
11	11 - 55-gallon drums	Throughout southwestern portion of property	HRP observed four empty drums, and seven partially-filled drums containing unidentified wastes.	Sampling of drum contents (Weston, 1998)	Drums were removed	No soil or groundwater sampling; however, no staining or visual impacts were noted during 2006 site visit
12	Discharge pipes	East of Building A along Harbor Brook	Pipes formerly discharged wastewater from Building A to Harbor Brook.	Limited sediment and surface water sampling (Weston, 1998) is available.	None reported	The existing data indicates that the sediment can be dredged and stockpiled. Dredged sediment will need some additional characterization following dredging.
13	Dry well	Southeast of Building B	Unknown materials may have been disposed of via the dry well.	Soil and groundwater sampling conducted at MW-14 (Weston, 1998)	None reported	No comprehensive soil or groundwater sampling has been performed in vicinity of dry well; however, a significant release does not appear to have occurred
14	Dust piles	East of Building A under dust collectors	Piles of dust generated from facility's former silver polishing dust collection system.	Sampling of dust pile contents	Dust collectors cleaned and dust piles removed in 2005. Top 2 ft of soil beneath dust collectors removed in 2005. Excavations were backfilled with stone.	Contaminated soil beneath 2 ft bgs has not been fully characterized.
15	Debris piles	East of Harbor Brook and southwest corner of property	Several piles of earthen material, scrap, and debris.	None	Debris piles removed in 2005.	No soil sampling has been performed for this AOC
16	Debris pile	Southwest side of Building A	Pile of medical glass slides near the building dock of Building A.	None	None reported	No characterization data has been collected
17	Contaminated soil	Northeast corner of property in vicinity of former Building D	Approximately 5,600 ft ² of chlorinated solvent contaminated soil (to a depth of at least 15 ft below ground surface).	Soil and groundwater sampling and soil gas survey (Weston, 1998)	None reported	Source has not been adequately defined.
18	Contaminated soil	Area adjacent to Building C	15 ft ² of fuel oil stained soil (noted by Weston, 1999).	None	Oil stained soil removed in 2005	No soil sampling has been performed for this AOC

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
19	Contaminated soil	Under dust piles east of Building A.	1,600 ft ² of green stained soils contaminated with metals from overlying dust piles.	Soil sampling data (Weston, 1998; GZA, 2000; and CTDEP (2005)	Top 2 ft of soil beneath and in vicinity of dust collectors removed in 2005.	Contaminated soil and groundwater beneath 2 ft bgs has not been fully characterized.
20	Contaminated wood floor	South end of Building A	30 ft ² of oil stained wooden floor.	None	None reported	Wood floor has not been characterized
21	Stained concrete	North end of Building A	40 ft ² of stained concrete floor.	None	None reported	Stained concrete has not been characterized
22	Debris pile	Adjacent to smoke stack south of Building C	10 ft ² of deteriorated insulation material, possibly asbestos-containing material.	None	Debris pile removed.	No soil sampling has been performed for this AOC; however, removal of pile was confirmed through visual observation.
23	Stained soil	East of Building A	10 ft ² of paint stains.	Soil sampling data (Weston, 1998; GZA, 2000; and CTDEP (2005)	Top 2 ft of soil beneath and in vicinity of dust collectors removed in 2005.	None
24	Possible UST	West side of former Building D	Possible UST identified by ICF Kaiser Engineers	Soil gas survey and groundwater sampling data at MW-7, a nearby well (Weston, 1998)	None reported	No comprehensive soil or groundwater sampling has been performed in vicinity of UST.
25	Contaminated groundwater	Various portions of property	Groundwater contaminated with chlorinated solvents have been documented in various portions of site.	Groundwater sampling data (Weston, 1998; Milone & MacBroom; GZA, 2000)	None reported	See AOCs 1, 2, 3, 5, 6, 13, 17, 19, 24, and 30.
26	Contaminated surface water and sediments	Harbor Brook	Process wastewater is known to have been discharged to Harbor Brook	Limited sediment and surface water sampling (Weston, 1998) is available.	None reported	The existing data indicates that the sediment can be dredged and stockpiled. Recommend additional characterization for handling/disposal of sediment as part of dredging project.
27	Asbestos containing materials	Throughout building interiors	Asbestos-containing pipe insulation, floor tiles and roof shingles have been identified in on-site buildings	N/A	N/A	N/A
28	Lead paint	Throughout building interiors	Peeling paint noted in on-site buildings.	N/A	N/A	N/A
29	Fluorescent light ballasts	Throughout building interiors	Fluorescent light ballasts may contain hazardous metals and PCBs.	N/A	N/A	N/A

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
30	Louie's Auto shop (55 Cooper St.)	Down-gradient of Louie's Auto.	Louie's Auto shop may be an upgradient source of groundwater contamination.	None	None reported	The groundwater down-gradient of Louie's Auto shop has not been characterized. Suspected flow direction is southeast and is not anticipated to significantly impact the Site. However, no data has been collected to confirm flow direction.
31	Site-wide surficial soils	Throughout site.	Site-wide soil may need to be managed as part of site redevelopment activities.	Limited surficial soil data is available.	In vicinity of dust collectors	Comprehensive characterization of site-wide surficial soils has not been conducted.
32	Building B	In building interior.	Electrical transformers located in building may contain PCBs.	None	None reported	The interior of Building B has not been adequately characterized.
33	Subsurface Soils and Groundwater Beneath Building A	Building A	Releases may have occurred resulting in impacts to soil and groundwater located beneath Building A.	Limited sampling data collected by GZA (2000).	None reported	Subsurface conditions beneath Building A have not been adequately characterized.
SA-A	Stabilization Area A Smokestack Removed	No further action proposed for this AOC				
SA-B	Stabilization Area B Contaminated Soil Piles Removed (AOC-15)	Between former smokestack and 10,000 gal. UST	Location of former contaminated soil piles, which were comprised of street sweepings, pavement, concrete, stumps, etc.	No soil or groundwater data is available	Piles removed	No soil sampling has been performed for this AOC
SA-C	Stabilization Area C Asphalt Piles Removed	East of Stabilization Area B	Location of former asphalt piles	No soil or groundwater data is available	Piles removed	No soil sampling has been performed for this AOC
SA-D	Stabilization Area D Asbestos-Impacted Soil Removed	Underneath former elevated heat transfer line	Asbestos-impacted soils	Limited soil sampling data is available	Visually impacted soil removed	No confirmatory soil sampling has been performed for this AOC
SA-E	Stabilization Area E Metal-Impacted Soil Removed	Underneath former elevated heat transfer line and west of former smokestack	Metal dust-impacted soil	Limited soil sampling data is available	Visually impacted soil removed	No comprehensive or confirmatory soil sampling has been performed for this AOC
SA-F	Stabilization Area F Impacted Soil Stockpile Staging Area #1	Located along eastern site boundary	Staging area during 2005 stabilization activities. Materials were staged on plastic sheeting.	No soil or groundwater data is available	Stockpile removed in 2005.	Quality of surficial soil is not known in this area. These samples may be utilized as part of the evaluation of site-wide soils.

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
SA-G	Stabilization Area G 10,000-gal. Waste Water UST Removed (AOC-3)			See AOC-3		

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
SA-H	Stabilization Area H Metal-Impacted Soil Removed	Adjacent to and north of 10,000-gal. waste water UST	Metal dust-impacted soil	Limited soil data is available	Visually impacted soil removed	No comprehensive or confirmatory soil sampling has been performed for this AOC
SA-I	Stabilization Area I Impacted Soil Stockpile Staging Area #2 (Part of AOC-15)	Located along eastern site boundary	Staging area during 2005 stabilization activities. Materials were staged on plastic sheeting. However, AOC-15 was also located in this area.	No soil or groundwater data is available	Stockpile removed in 2005.	Quality of surficial soil is not known in this area. These samples may be utilized as part of the evaluation of site-wide soils.
SA-J	Stabilization Area J 275 Gal. Gasoline UST Removed			See AOC-4		
SA-K	Stabilization Area K Oil-Stained Soil Removed			See AOC-18		
SA-L	Stabilization Area L 2x20,000-gal. #6 Oil Tanks Cleaned			See AOC-1		
SA-M	Stabilization Area M Impacted-Soil and Fire Debris Pile Removed (AOC-15)	In location of former Building D	Pile of impacted soil and fire debris	No soil or groundwater data is available	Visually impacted soil and debris pile removed	No comprehensive or confirmatory soil sampling has been performed for this AOC
SA-N	Stabilization Area N Building "C" Asbestos and Lead Abatement Work	At Building C	Removal of lead- and asbestos-containing materials	No surficial soil data for soil in vicinity of building is available	Lead and asbestos abated in building	No soil sampling has been performed for this AOC
SA-O	Stabilization Area O Impacted-Soil and Debris Pile Removed	Just southeast of footbridge	Pile of impacted soil and debris	No soil or groundwater data is available	Visually impacted soil and debris pile removed	No comprehensive or confirmatory soil sampling has been performed for this AOC
SA-P	Stabilization Area P Asbestos Roof Removed from UST Bunker	At UST bunker located adjacent to Building C	Removal of asbestos-containing materials	No surficial soil data for soil in vicinity of building is available	Asbestos abated	No soil sampling has been performed for this AOC
SA-Q	Stabilization Area Q Building "B" Asbestos and Lead Abatement Work	At Building B	Removal of lead- and asbestos-containing materials	No visual impacts were observed.	Surficial soil removed on western side of building	None - eastern side of building is concrete bridge.
SA-R	Stabilization Area R Metals-Impacted Soils Removed and Stone Cover Installed			See AOCs-14 and -19		

TABLE 1
Summary of Areas of Concern
International Silver Company, Factory H
Meriden, Connecticut
Metcalf & Eddy, Inc.

No.	Area of Concern	Location	Description	Available Data	Completed Remedial Actions	Data Gaps
SA-S	Stabilization Area S Sump Cleaned of Metal-Impacted Sludge	Adjacent to Building A near Building B	Depression in soil that contained metal-impacted sludge	Soil sampling data is available.	Metal-impacted sludge removed	No groundwater data is available
SA-T	Stabilization Area T Building "A" 2nd & 3rd Floor Asbestos Abatement Work - Address other Portions of Building	At Building A	Removal of asbestos-containing materials	No surficial soil data for soil in vicinity of building is available	Asbestos abated in building	Limited sampling has been conducted for this AOC.
SA-U	Stabilization Area U 1,000-gal. Heating Oil UST Cleaned			See AOC-5		
SA-V	Stabilization Area V UST Grave Found (No UST)			See AOC-5		
SA-W	Stabilization Area W Empty Concrete Vault Found			See AOC-2		

Notes:

SA = CTDEP stabilization area
UST = underground storage tank.
AST = aboveground storage tank.
ft² = square feet.
PCBs = polychlorinated biphenyls.
N/A = not applicable.

**Table 2. Summary of Potential Environmental Hazard Sources from
Federal and State Environmental Databases
INSILCO - Factory H, Meriden, CT**

Site Name	Site Address	Map ID	Location and Elevation Relative to Site	Database Containing Site	Nature and Status of Site	Risk to Site
Target Property	77 Cooper Street Meriden, CT	A1	Onsite	LWDS	Misc. Surface Leachate, inactive	High
		A2		Brownfields	CT Brownfields	Unknown
		A3		SDADB	Spill/Dump of Chlorinated VOCs and Metals	High
Meriden Area Work Center	56 Cooper Street	B4	South, <1/8 mile, Lower elevation	UST	5 tanks, all closed in - place; 100 gal - Used Oil; 2 -3000 gal and 2 -4000 gal - Gasoline	Moderate - High
Meriden Service Center		B5		RCRA -SQG, FINDS, CT Spills, CT PROPERTY, SDADB	5 violation records recorded for site: generator - pre - transport requirements, waste tanks - tank management, haz. waste determinations, generator inspection schedule & log, and generator - other requirements; motor oil spill reported (2002); container failure, mastic spilled to pavement , speedi dri applied and removed (2001); Property transfer Form III when a discharge, spillage, uncontrolled loss, seepage or filtration of haz. waste has occurred at parcel that has not been fully remediated or the environmental conditions at parcel are unknown; Submittal of site characterization of tank failure (1995) indicated soil contamination, no free product. 3 GW monitoring wells installed, 2 tanks to be abandoned in place	Low
Hanover Towers	76 Butler Street	C6	North, <1/8 mile, Lower elevation	LUST, CT Spills	Incident date 08/08/97, no additional information reported; #2 fuel oil spill, 2 -20,000 gal USTs and soil contamination removed	Moderate - High
		C7		UST	1 -20000 gal - heating oil, tank removed from ground; 1 - 1000 gal - diesel, tank removed from ground; 1 -1000 gal - diesel, tank currently in use; 1 -20000 gal - heating oil, tank currently in use; 1 - 20000 gal - heating oil, tank removed from ground	Moderate - High
Vacant	35 Meridian Street	D8	SSW, <1/8 mile, Higher elevation	UST	1 - 1000 gal - heating oil, removed	Moderate
Personal Expressions		D9		CT PROPERTY, SDADB	Form I - no release of haz. waste has occurred at parcel being transferred	Low
Kogut Nursery	Yale Avenue	E10	NNW, <1/8 mile, Lower elevation	UST	1 -4000 gal - gasoline, currently in use; 1 - 4000 gal - gasoline, removed; 1 - 4000 gal - gasoline, removed; 1 - 4000 gal - gasoline, removed; 1 -2000 gal diesel, currently in use	Moderate - High
Meriden Medical Center	Cook Avenue	11	NW, 1/8 -1/4 mile, Lower elevation	UST	1 - 10000 gal - gasoline, currently in use	Moderate - High
Tooling Technology, Inc.	26 Cherry Street	12	ENE, 1/8 -1/4 mile, higher elevation	UST	1 -1000 gasoline, removed	Low
Kwik Mart	80 Cook Avenue	E13	NNW, 1/8 -1/4 mile, lower elevation	UST	1 -6000 gal - gasoline, currently in use; 1 - 6000 gal - gasoline, currently in use; 1 - 6000 gal - gasoline, tank removed from ground; 1 - 6000 gal - gasoline, tank removed from ground; 1 - 6000 gal - gasoline, tank removed from ground	Moderate - High

**Table 2. Summary of Potential Environmental Hazard Sources from
Federal and State Environmental Databases
INSILCO - Factory H, Meriden, CT**

Site Name	Site Address	Map ID	Location and Elevation Relative to Site	Database Containing Site	Nature and Status of Site	Risk to Site
Mid State Medical Center	1 King Place	F14	West, 1/8 -1/4 mile, higher elevation	ENF, Brownfields	2.7 acres - former hospital; NOV issued by Bureau of Air Management	Low
Veterans Memorial Medical Center, West		F15		UST	1 - 20000 gal - heating oil, closed in place; 1 -15000 gal - heating oil, currently in use; 1 - 2000 gal - gasoline, currently in use; 1 -2000 gal - heating oil, currently in use; 1 - 5000 gal - heating oil, currently in use; 1 -10000 gal - heating oil, currently in use	Low - Moderate
Meriden Gas Light Co.	Cooper Street	16	South, 1/8 -1/4 mile, lower elevation	Manufactured Gas Plants	No Info. Given	Unknown
Firestone Store 7056	72 Cook Avenue	G17	NNW, 1/8 -1/4 mile, lower elevation	RCRA -SQG, FINDS	Small quantity generator, no violations	Low
		G18		UST	1 -500 gal - used oil, removed; 1 - 2000 gal - heating oil, removed	Low
Motor Vehical Dept, (Butler St. Fire)	47 Butler Street	19	North, 1/8 -1/4 mile, lower elevation	UST	1 -1000 gal - gasoline, removed	Low
Southern New England Tele. Co.	27 Butler Street	H20	North, 1/8 -1/4 mile, higher elevation	RCRA -SQG, FINDS	Small quantity generator, no violations; AIRS Facility System, RCRA	Low
Meriden Central Office (7801)		H21		UST	1 -5000 gal - kerosene, currently in use; 1 -10000 gal - heating oil, currently in use; 1 -10000 gal - gasoline, currently in use; 1 -10000 gal - gasoline, removed; 1 -1500 gal - gasoline, removed; 1 -10000 gal - heating oil, removed; 1 -5000 gal - kerosene, currently in use; 1 -5000 gal - kerosene, currently in use	Moderate
Meriden Post Office	87 Colony Street	22	ENE, 1/8 -1/4 mile, higher elevation	UST	1 -6000 gal - heating oil, removed	Low
SNET	25 Butler Street	H23	North, 1/8 -1/4 mile, higher elevation	CT PROPERTY, SDADB	Form I - no release of haz. waste has occurred at parcel being transferred	Low
Spencer's Garage	274 Cook Avenue	24	SSW, 1/8 -1/4 mile, lower elevation	CT PROPERTY, SDADB	Form II - when a discharge, spillage, uncontrolled loss, seepage or filtration of haz. waste has occurred, but a cleanup has been completed and approved in writing by the Commissioner or has been verified by a LEP to have been performed in accordance with remediation standards. Written documentation must accompany submission of the Form II. No approval/verification reported.	Low - Moderate
Harbor Towers Lim. Part.	60 Hanover Street	25	NNE, 1/8 -1/4, lower elevation	UST	1 -15000 gal - heating oil, tank removed from ground; 1 - 10000 gal - diesel, tank removed from ground; 1 -1000 gal - diesel, tank removed from ground; 1 -1000 gal - diesel, currently in use; 1 -20000 gal - heating oil, currently in use	Low - Moderate
Modern Home Construction	292 Cook Avenue	26	SSW, 1/8 -1/4 mile, lower elevation	UST	1 -2000 gal - gasoline, closed in place; 1 -3000 gal - gasoline, currently in use	Low

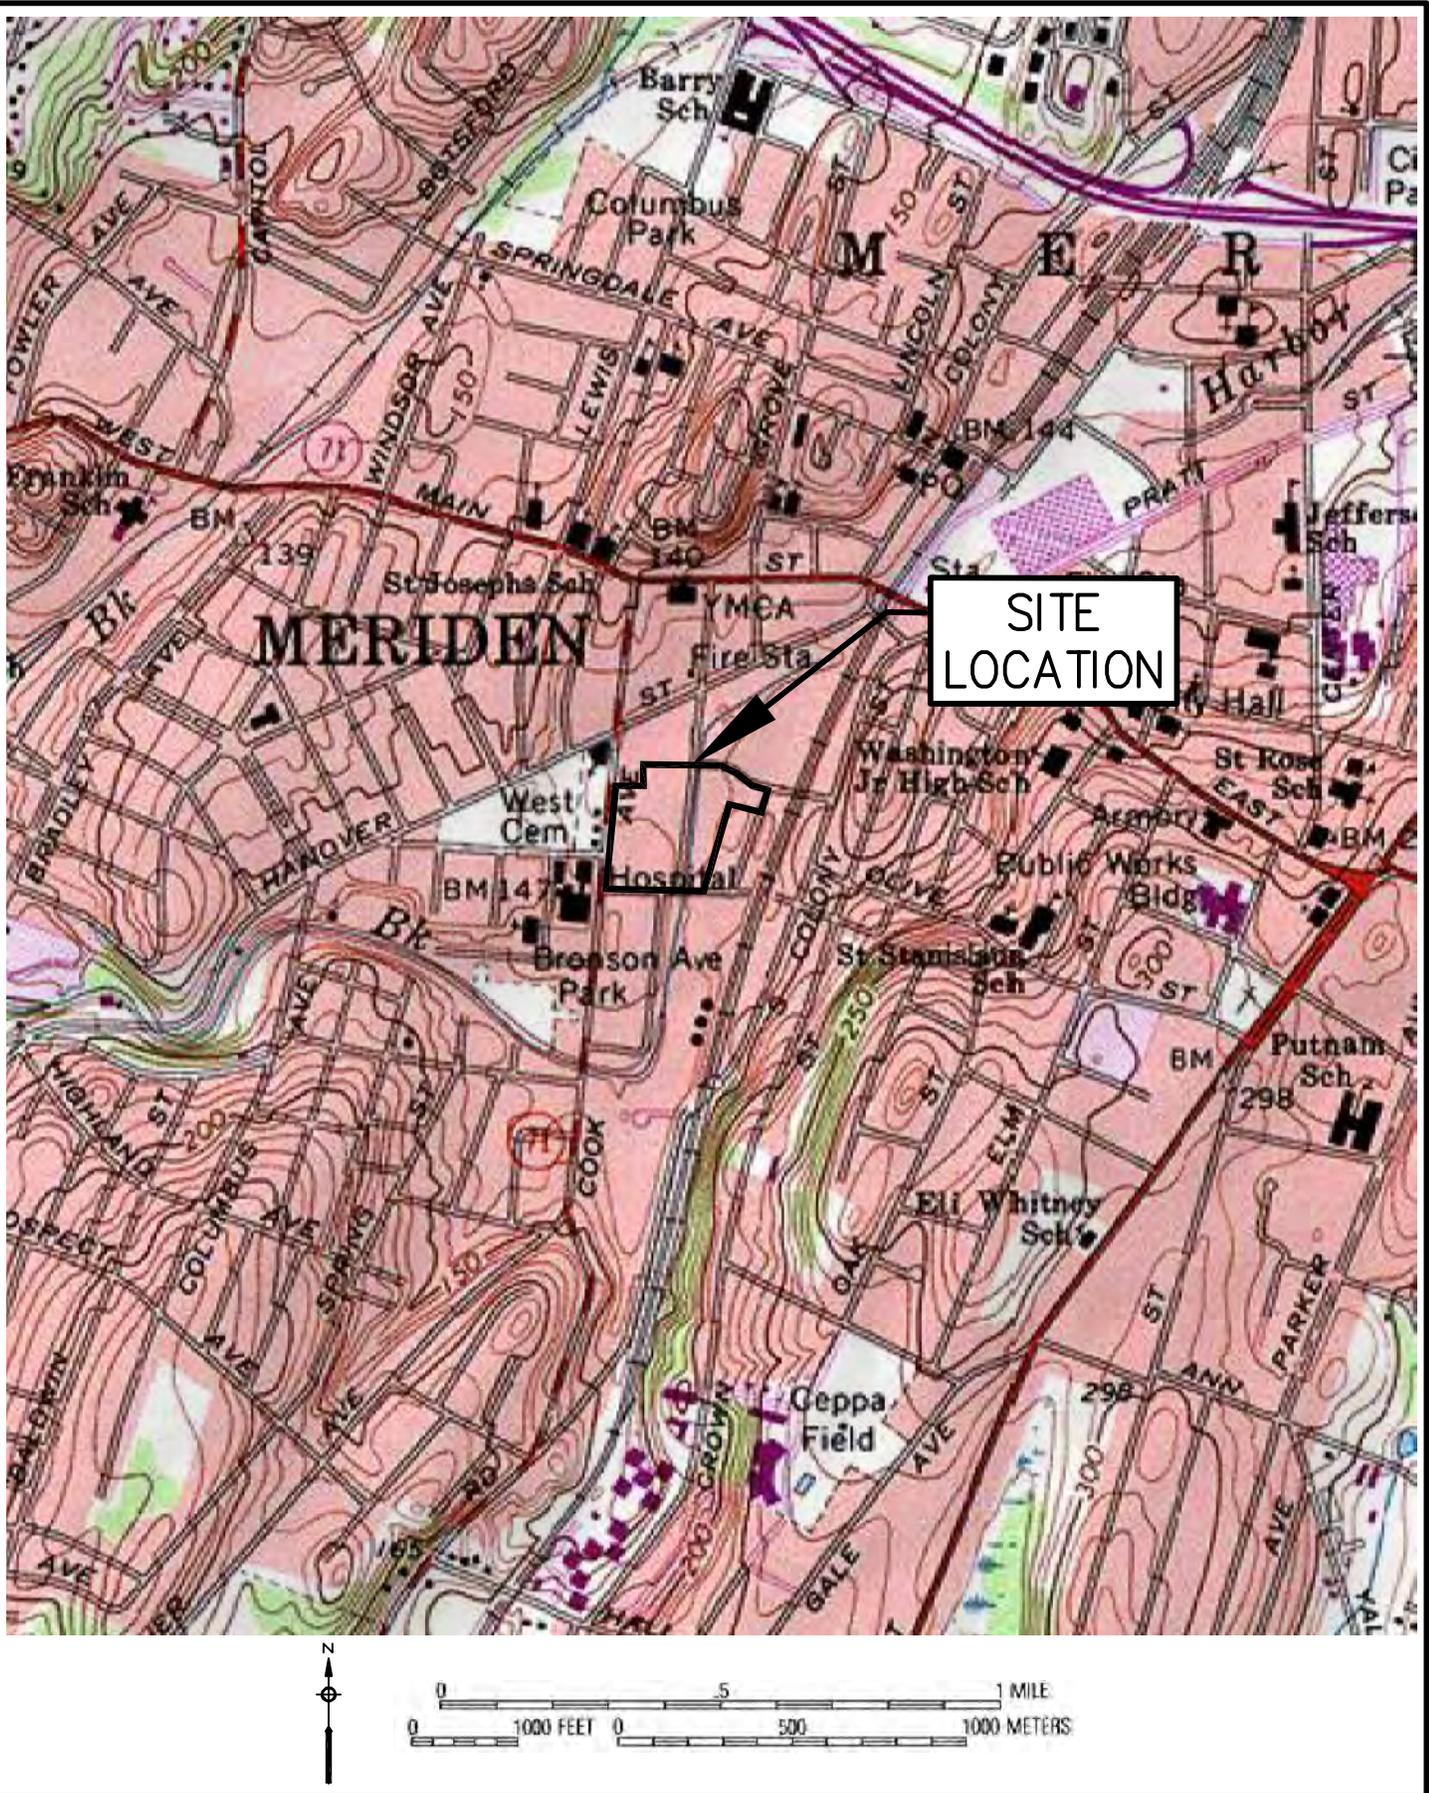

**Table 2. Summary of Potential Environmental Hazard Sources from
Federal and State Environmental Databases
INSILCO - Factory H, Meriden, CT**

Site Name	Site Address	Map ID	Location and Elevation Relative to Site	Database Containing Site	Nature and Status of Site	Risk to Site
Colonial Custom Cleaners	9 Butler Street	27	North, 1/4 -1/2 mile, higher elevation	RCRA -SQG, FINDS, CT PROPERTY, SDADB	3 violation records reported for site: haz. waste determinations, 2 generator pre -transport requirements; CT Property Transfer Form III when a discharge, spillage, uncontrolled loss, seepage or filtration of haz. waste has occurred at parcel that has not been fully remediated or the environmental conditions at parcel are unknown; oil & PCE spill/dump to ground	Moderate - High
Meriden Senior Center	22 West Main Street	28	NNE, 1/4 -1/2 mile, higher elevation	LUST	Incident date 1/13/89, no additional info. reported	Unknown
The Meriden Record Co.	11 Crown Street	29	NE, 1/4 -1/2 mile, higher elevation	SDADB	Spill/dump of chemical liquid/sludges	Moderate
CT National Bank	1 West Main Street	30	NE, 1/4 -1/2 mile, higher elevation	LUST	Incident date 1/30/90, no additional info. reported	Unknown
Zimmerman, Joseph M.D.	319 Hanover Street	31	West, 1/4 -1/2 mile, higher elevation	CT PROPERTY, SDADB	Form I - no release of haz. waste has occurred at parcel being transferred	Low
Unknown	231 West Main Street	32	NNW, 1/4 -1/2 mile, higher elevation	LUST, CT Spills	Incident date 9/28/98, #2 fuel oil, 550 gal LUST removed, no free product	Moderate
Office Complex	95 East Main Street	33	ENE, 1/4 -1/2 mile, higher elevation	LUST	Incident date 11/10/92, no additional info reported	Unknown
Duffy Property	382 Cook Avenue	34	SSW, 1/4 -1/2 mile, lower elevation	SDADB	Spill/Dump of Chlorinated VOCs and Metals in drywell	Low
Guest Company Inc.	49 Elm Street	35	East, 1/4 -1/2 mile, higher elevation	CT PROPERTY, SDADB	Form I - no release of haz. waste has occurred at parcel being transferred	Low
American Oil Change Corp.	321 -327 West Main Street	36	NW, 1/4 -1/2 mile, lower elevation	CT PROPERTY, SDADB	Form I - no release of haz. waste has occurred at parcel being transferred	Low
Meriden Water Pollution Control Facility	Evansville Road	37	ENE, 1/4 -1/2 mile, higher elevation	CT Spills, UST, SDADB	Spill/dump of POTW Bypass, Unknown amount larger than 10 gal; 1 -2000 gal - gasoline, tank removed from ground; 1 -5000 gal - gasoline, tank removed from ground; 1 -2500 gal - gasoline, tank removed from ground; 1 -1000 gal - diesel, tank removed from ground; 1 -2000 gal - diesel, tank removed from ground; 1 -2000 gal - heating oil, tank removed from ground; 1 -500 gal - heating oil, tank removed from ground; 1 -1500 gal - diesel, tank removed from ground	Moderate
J.B. Coggins	Not Given	38	ENE, 1/2 -1 mile, higher elevation	LWDS	Metal hydroxide sludge lagoon to be excavated and closed, HWMR monitoring required, inactive	Moderate - High
Penbeck Oil Co.	Not Given	39	NW, 1/2 -1 mile, higher elevation	LWDS	Gas station line leak, inactive	Low
Quinlan Russell	5 Cross Street	40	NE, 1/2 -1 mile, lower elevation	RCRA -SQG, FINDS, RCRA -TSD, RAATS, CORRACTS, CERC -NFRAP	Facility or area assigned a medium corrective action priority; 16 violation records reported at site (see EDR for complete list)	Low - Moderate

APPENDIX 1
STATEMENT OF LIMITATIONS

STATEMENT OF LIMITATIONS

The data presented and the opinions expressed in this report are qualified as follows:

1. The sole purpose of the investigation and of this report is to assess the physical characteristics of the Site with respect to the presence or absence in the environment of oil or hazardous materials and substances as defined in the applicable state and federal environmental laws and regulations and to gather information regarding current and past environmental conditions at the Site.
2. Metcalf & Eddy (M&E) derived the data in this report primarily from visual inspections, examination of records in the public domain, and interviews with individuals with information about the Site. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in the report.
3. In preparing this report, M&E has relied upon and presumed accurate certain information (or the absence thereof) about the Site and adjacent properties provided by governmental officials and agencies, the Client, and others identified herein. Except as otherwise stated in the report, M&E has not attempted to verify the accuracy or completeness of any such information.
4. The data reported and the findings, observations, and conclusions expressed in the report are limited by the Scope of Services. The Scope of Services, was defined by the requests of the Client, the time and budgetary constraints imposed by the Client, and the availability of access to the Site.
5. Because of the limitations stated above, the findings, observations, and conclusions expressed by M&E in this report are not, and should not be considered, an opinion concerning the compliance of any past or present owner or operator of the site with any federal, state or local law or regulation. No warranty or guarantee, whether express or implied, is made with respect to the data reported or findings, observations, and conclusions expressed in this report. Further, such data, findings observations, and conclusions are based solely upon site conditions in existence at the time of investigation.
6. This report has been prepared on behalf of and for the use of the Client, and is subject to and issued in connection with the Agreement and the provisions thereof.

APPENDIX 2

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Phase I Environmental Site Assessment Staff

Catie Nagel, BS Civil Engineering, Villanova University, 2002. Approximately 4 years of environmental consulting experience at M&E performing a variety of work, including Phase I ESA research, report preparation, site assessments, field investigations, and remediation oversight.

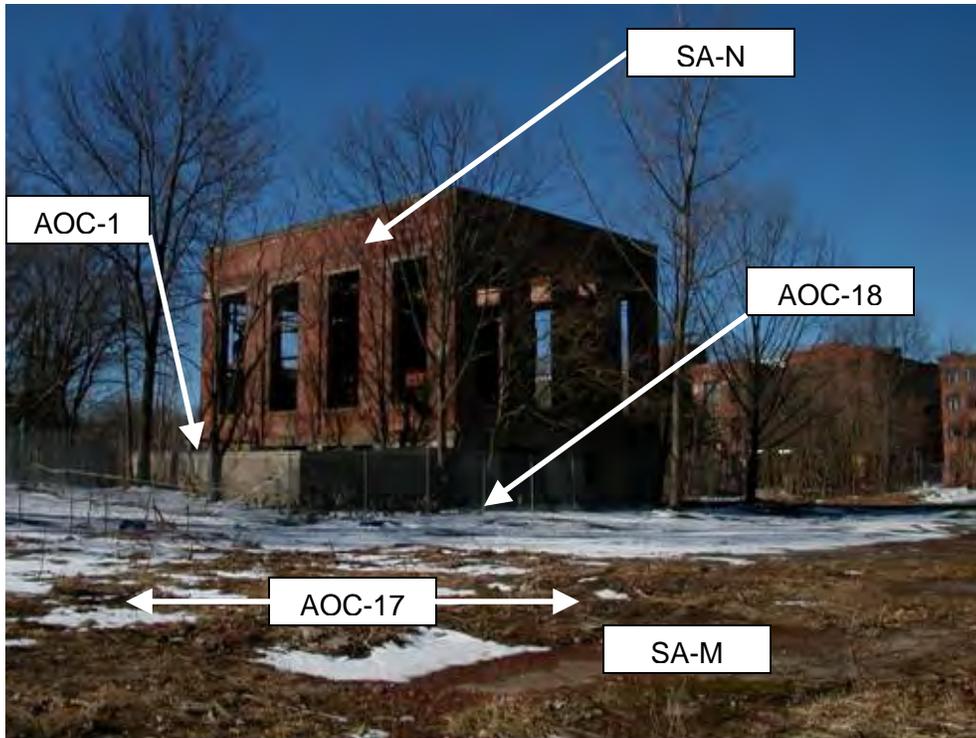

Lucas Hellerich, PE, PhD Environmental Engineering, University of Connecticut, 2004. Nearly 7 years of environmental consulting experience, including over 5 years with M&E. Experience encompasses a wide variety of environmental projects including environmental site assessments, environmental field investigations, and Phase I ESA research and report preparation.

John Albrecht, LEP, BS Natural Resource Management/Environmental Science, University of Connecticut, 1992. Nearly 14 years of environmental consulting experience, including over 10 years with M&E. Experience encompasses a wide variety of environmental projects and includes conducting more than 50 Phase I ESAs.

APPENDIX 3

SITE PHOTOGRAPHS

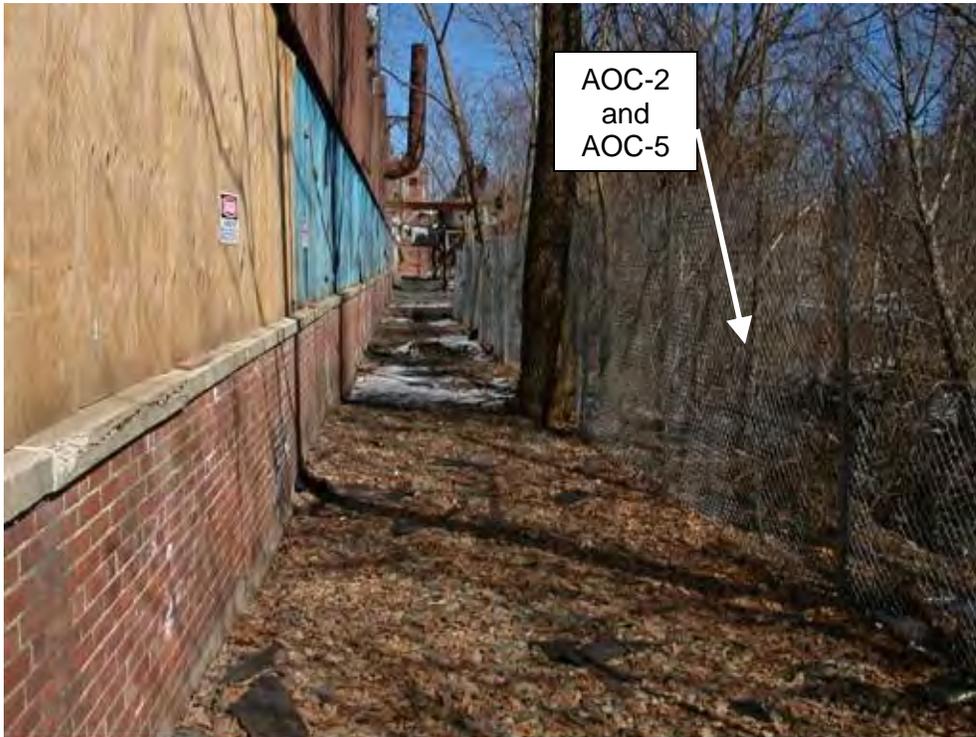

(Refer to Table 1 for Descriptions of AOCs and SAs)

Photograph 1. View of Building C (former boiler house), AOC-1 (20,000 gallon UST bunker), and AOC-18 (oil-stained soil removal), facing west. Building A is in the background, while AOC-17 (chlorinated solvent-impacted soil) and SA-M (impacted soil and fire debris removal) are in the foreground. SA-N represents the removal of lead and asbestos-containing materials from Building C.

Photograph 2. View of deteriorated roof for AOC-1 (UST bunker). This roof represents SA-P and is a suspected source of asbestos-containing material.

Photograph 3. View of AOCs 2 and 5 (USTs), facing to the north. AOCs 2 and 5 are located to the right of the fence between the brook and the southeastern side of Building A

Photograph 4. View of AOC-3 (10,000 gal. UST) and SA-H (removal of metal-impacted soil), following stabilization, facing north.

Photograph 5. View of AOC-4 (UST), following stabilization, facing the southern side of Building C.

Photograph 6. View of aboveground storage tank concrete cradle (removed by others), adjacent to AOC-5.

Photograph 7. View of area of AOC-6 (possible UST fill pipes) along-side of Building A, facing south. Pipes were removed during CTDEP stabilization activities.

Photograph 8. View of AOC-10, 150,000 gallon water tower, facing west. The elevated heat transfer line connecting the water tower to Building A is shown.

Photograph 9. View of AOC-11 (drum storage) and a portion of AOC-27/SA-T (asbestos-containing building materials).

Photograph 10. View of Harbor Brook, which bisects the site, facing south. The brook represents AOCs-12 and 26.

Photograph 11. View of AOC-13, dry well area, facing northwest.

Photograph 12. View of AOCs 14 and 19, located on the eastern side of Building A. Stabilization area SA-R is shown. Cyclone dust collectors are shown on the left of the photograph.

Photograph 13. View of the western edge of AOC-15 (multiple stockpiles of debris), along Harbor Brook.

Photograph 14. View of an individual stockpile of AOC-15, located at the southeastern corner of Building A.

Photograph 15. View of former stockpile areas for AOC-15, located along the eastern property boundary. This location also encompasses SA-F and SA-I.

Photograph 16. View of AOC-15 (SA-B and SA-C), located south of the water tower.

Photograph 17. View of AOC 17, located on the northeastern portion of the site, facing northeast.

Photograph 18. View of AOC-17, located on the northeastern portion of site, facing northwest.

Photograph 19. View of AOC-18, located on north side of UST bunker (AOC-1) at Building C, facing west. AOC-18 is just to the right of the fence.

Photograph 20. View of cyclone dust collectors, which were used to collect dust from the former silverware manufacturing operations, facing west.

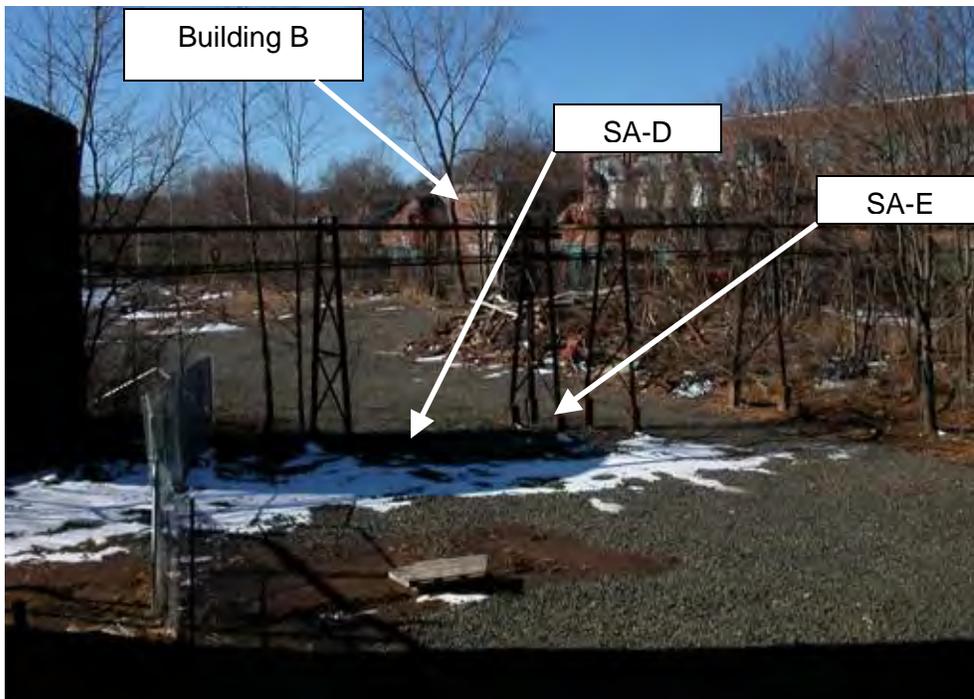

Photograph 21. View of AOC-24, possible location of UST, facing west.

Photograph 22. View of AOC-30, Louie's Auto Body Shop, located adjacent to the southern portion of site, facing northwest.

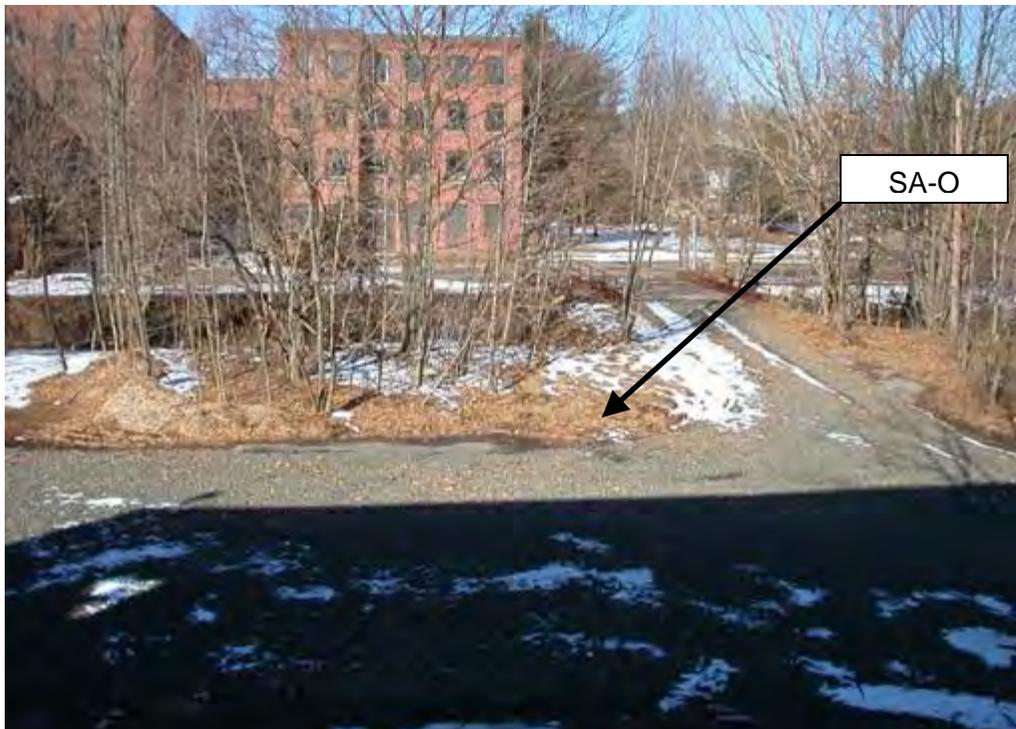

Photograph 23. View of Building B (AOC-32), facing west.

Photograph 24. View of water tower, elevated heat transfer line, SA-D (removal of asbestos-impacted soil), SA-E (removal of metals-impacted soil), and Buildings A and B, from the second floor of Building C, facing south.

Photograph 25. View of Building A, from the second floor of Building C, facing west.

Photograph 26. View of SA-O, following the removal of metal-impacted surface soils.

THE EDR AERIAL PHOTO DECADE PACKAGE

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs at one photo per decade.

References

EPAs Standards and Practices for All Appropriate Inquiries (AAI), section 312.24, identifies the historical sources of information necessary to achieve the objectives and performance factors of section 312.20. According to AAI, *"historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."*

To meet the prior use requirements of ASTM E 1527-05, Section 8.3.2, the following standard *historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-05, Section 8.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. ASTM E 1527-05 requires *"All obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary and both reasonably ascertainable and likely to be useful."* (ASTM E 1527-05, Section 8.3.2) *Reasonably ascertainable means information that is publicly available, obtainable from a source within reasonable time and cost constraints, and practically reviewable.*

Data Gaps

In order to address *data gaps*, additional sources of information may be consulted. According to the AAI, Section 312.20 (g), *"to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps."* According to ASTM E 1527-05, Section 8.3.2.3, *"historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met....If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for their exclusion."*

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

EDR Historical Cleaners..... EDR Proprietary Historic Dry Cleaners

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CORRACTS:CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/29/2005 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
<i>QUINLAN RUSSELL</i>	<i>5 CROSS STREET</i>	<i>1/2 - 1 NE</i>	<i>40</i>	<i>85</i>

RCRAInfo:RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/15/2005 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

SHWS:The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the SHWS list, as provided by EDR, and dated 11/21/2005 has revealed that there are 2 SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

CT Property:

Date Recieved: 6/14/1989
 Property Transfer Forms: Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAFA)(DEP-PERD-PTP-200).

CT Property:

Date Received: 1/11/1994
 Property Transfer Forms: Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAF)(DEP-PERD-PTP-200).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/14/05	Source: EPA
Date Data Arrived at EDR: 11/02/05	Telephone: N/A

Number of Days to Update: 35	Next Scheduled EDR Contact: 05/01/06
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date Made Active in Reports: 12/07/05	Last EDR Contact: 01/31/06
Number of Days to Update: 35	Next Scheduled EDR Contact: 05/01/06
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/15/05	Source: EPA

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/03	Source: EPA
Date Data Arrived at EDR: 01/03/05	Telephone: 202-564-4203

	Data Release Frequency: Annually

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 10/18/05	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 10/31/05	Telephone: 301-415-7169
Date Made Active in Reports: 12/20/05	Last EDR Contact: 02/08/06
Number of Days to Update: 50	Next Scheduled EDR Contact: 04/03/06
	Data Release Frequency: Quarterly

MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 11/08/05	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 12/27/05	Telephone: 303-231-5959
Date Made Active in Reports: 01/30/06	Last EDR Contact: 12/27/05
Number of Days to Update: 34	Next Scheduled EDR Contact: 03/27/06
	Data Release Frequency: Semi-Annually

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 01/09/06	Source: EPA
Date Data Arrived at EDR: 01/16/06	Telephone: N/A
Date Made Active in Reports: 02/21/06	Last EDR Contact: 01/03/06
Number of Days to Update: 36	Next Scheduled EDR Contact: 04/03/06
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Inventory of Hazardous Disposal Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 11/21/05
Date Data Arrived at EDR: 11/22/05

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Nursing Homes

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

INSILCO (FACTORY H)
COOPER STREET
MERIDEN, CT 06451

TARGET PROPERTY COORDINATES

Latitude (North):	41.53420 - 41° 32' 3.1"
Longitude (West):	72.8065 - 72° 48' 23.4"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	682989.7
UTM Y (Meters):	4600171.5
Elevation:	144 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

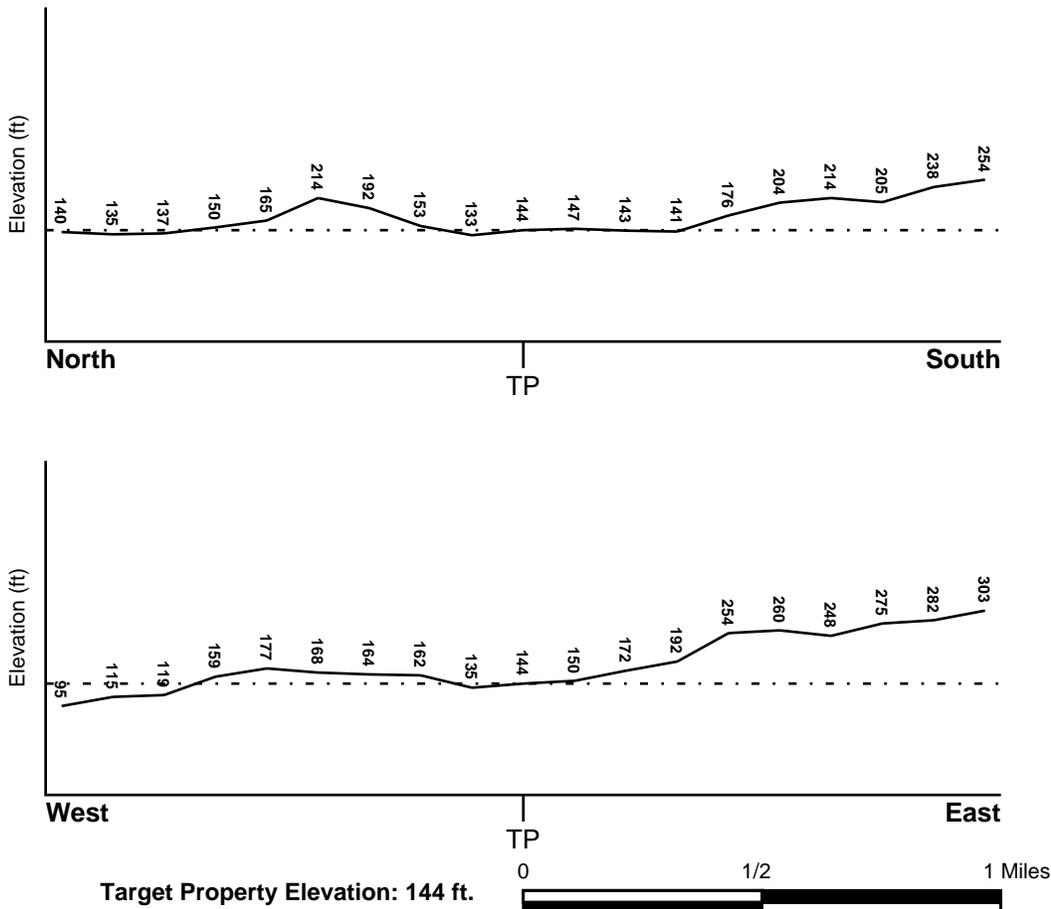

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 41072-E7 MERIDEN, CT
General Topographic Gradient: General SSW
Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> NEW HAVEN, CT	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map

<u>NWI Quad at Target Property</u> MERIDEN	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Triassic
Series:	Triassic
Code:	Tr (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sandy loam
loamy sand
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Soils

Source: Department of Environmental Protection

Telephone: 860-871-4047

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Connecticut Leachate and Wastewater Discharge Sites

Source: Department of Environmental Protection

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut

Source: EPA

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

Community and Non-Community Water System Wells

Source: Department of Public Health, Water Supplies Section

Telephone: 860-509-7333

Active, emergency and inactive wells used for potable purposes that are owned and operated by active community and non-community water systems in Connecticut.

City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. The city directory is a sophisticated tool for locating individuals and businesses. With each address, the directory lists the name of the corresponding occupant.

References

To meet the prior use requirements of ASTM E 1527-05, Section 8.3.2, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-05, Section 8.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. ASTM E 1527-05 requires *"All obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary and both reasonably ascertainable and likely to be useful."* (ASTM E 1527-05, Section 8.3.2) *Reasonably ascertainable means information that is publicly available, obtainable from a source within reasonable time and cost constraints, and practically reviewable.*

EPA's Standards and Practices for All Appropriate Inquiries (AAI), Section § 312.24, identifies the historical sources of information necessary to achieve the objectives and performance factors of § 312.20. According to AAI, *"historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."*

Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to the AAI, Section § 312.20 (g), *"to the extent there are data gaps (as defined in § 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps."* According to ASTM E 1527-05, Section 8.3.2.3, *"historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met...If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for their exclusion."*

Thank you for your business.

USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.

Reading Sanborn Maps

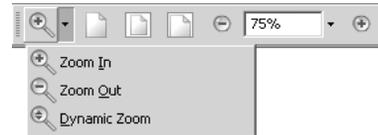

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: <http://www.edrnet.com/reports/samples/key.pdf>

Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

Navigating the Electronic Sanborn Image File

1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
 - A. On the menu bar, click "View" and then "Zoom to..."
 - B. Or, use the magnifying tool and drag a box around the TP

Printing a Sanborn Map From the Electronic File

- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

Acrobat Versions 6 and 7

1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

Acrobat Version 5

1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

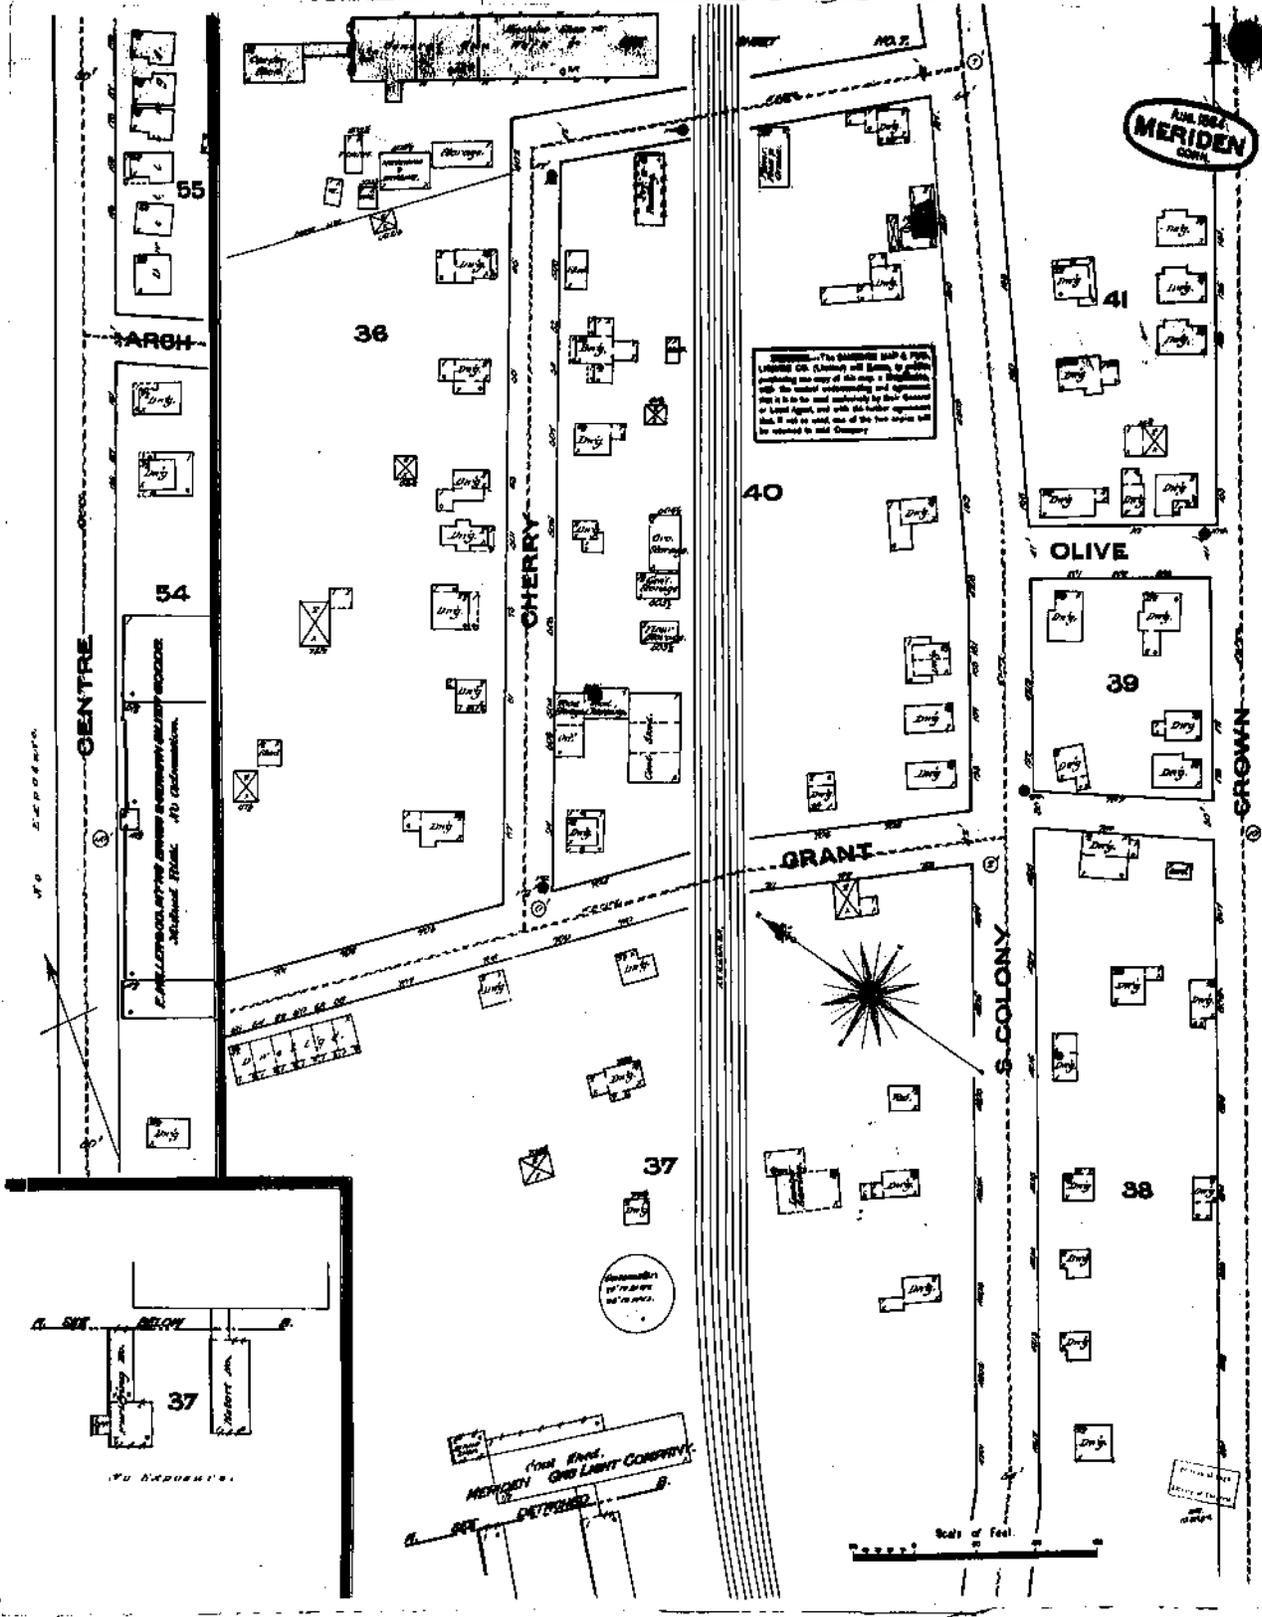

Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped into one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.
